Disclaimer Screenshotskin is an image viewer and screenshot tool that allows you to create screenshots from your desktop or other applications. It doesn't contain any malware, spyware or viruses. All the software that we publish on our website is fully virus-free. Nevertheless, your antivirus software should be running and updated at all times.The present invention relates to an improved process for the preparation of 2-aroyl-3-alken-4-ol esters, to the products obtained by this process, and to the use of such products. The subject of the invention is a process for the preparation of 2-aroyl-3-alken-4-ol esters which comprises the catalytic hydrogenation of N-aroyl-2-aryl-3-alkenamides. These compounds are prepared industrially by reacting aromatic nitriles with unsaturated carboxylic acids in the presence of catalysts such as nickel or ruthenium. The resulting products, aroylnitriles, are then reacted with a corresponding alcohol in the presence of catalysts such as rhodium, nickel or copper to obtain the corresponding esters. These processes are described in detail in the literature; see, for example, EP-A-0 516 194, EP-A-0 742 047, EP-A-0 587 877 and U.S. Pat. No. 4,130,632. An industrial drawback of the processes for the preparation of these esters is that the reaction of the nitrile leads to the formation of a mixture of 2-aryl-3-alkenamides and their corresponding amides. The amides, which are generally present in higher concentrations, can be separated from the 2-aryl-3-alkenamides, but this is a costly operation and the total yield is therefore low. The object of the present invention was to avoid this
