Time-dependent mass spectrometry-mass spectrometry (TD-MS-MS) is a powerful tool for structural investigations of compounds that can be analyzed under pressure with ambient ionization. The technique provides a unique combination of multiple reaction monitoring (MRM)

and MS(2) for the rapid analysis of sample components. In previous work, a prototype system was reported that performed multiple tandem mass spectrometric experiments within a single run. This report details a data acquisition system that performs real-time time-dependent mass spectrometric experiments with an electro-optical sampling device. The system allows the whole ionization source to be used as a cyclic ionization-ionization source, and it is a direct implementation of the principle described in the European Union's Seventh Framework Programme (FP7) project "Chemical proteomics based on the chemical analyzer for chemical

proteomics (CAPS)."Falcons Reviews Ratings Total Stars The Atlanta Falcons had their best regular season in years under head coach Mike Smith, now they are back in the playoffs for the first time since 2005. One of the reasons for their strong finish to the 2012 season was the offensive style Atlanta used to combat tough, physical defenses. The defensive unit can be just as good this season. This unit is led by star middle linebacker Luke Kuechly who was selected to his first Pro Bowl as a result of his stellar play. The Falcons will have to play their game against the Seattle Seahawks defense. This defense is led by a top five overall player in the NFL. With

the dynamic play of Bobby Wagner, the Seahawks are primed for a comeback victory at the Georgia Dome. Draft and Free Agency Preview With a young core of players, the Falcons needed to add quality through the draft and free agency. The Falcons have five picks in this year's draft and will be making an effort to maximize their draft position. If Atlanta wants to add an elite caliber starting safety, defensive lineman and linebacker, they could be looking at the players at those positions with their first three picks.
