Adobe Photoshop is available at no cost as of this writing, but any price range can afford a program that can be used to create and manipulate images. Adobe Photoshop Elements Adobe Photoshop Elements was designed as an alternative to Adobe Photoshop. It includes basic tools that work just like those in Photoshop, such as layers, brushes, fills, and colors. Elements is available for PCs and Macs. Adobe Photoshop Express Adobe Photoshop Express is a Web-based version of Photoshop designed to enable users to access their photos more easily and in real time. Unlike other Web-based image editors, Photoshop Express allows users to view and edit their photos simply by uploading their images and inserting them into the program. It's designed to work over a Web browser and doesn't require a separate download. Step 1: Creating Your Image Photoshop uses layers to save time and enable control. With layers, you can create a number of object comps (also called \_project comps\_ ), and you can work with many objects at once. In the following example, you begin by creating an object comp of the brick wall. Step 2: Defining the Background Next, you make sure the background (found at the bottom of the Layers Panel) is transparent by selecting the Background from the menu at the top of the Layers Panel. Click the Remove Background button at the bottom of the Layers Panel to accomplish this. Step 3: Creating a Layer Comp After setting the background, you proceed to create a layer comp for the brick wall, as follows: 1. Open a new image in your image editor. 2. Choose Window⇒Arrange⇒New Layer from Current Image. A dialog box opens, prompting you to name your layer. 3. Choose to create a clipping mask on this new layer. A cropping layer mask appears with the original image as a template. This cropping layer mask lets you see the original image inside the cropped view of your new layer. A cropping layer mask has a color similar to the color of the background. 4. Click OK to close the dialog box. By default, the layer comp is placed at the bottom of the Layers Panel. You can always place a new layer comp below the last one by clicking the arrow at the left of the Layers Panel. When you make a layer, it stays in that panel.

That said, here's a short guide to get you started. Tutorial for photographers Photoshop can be used in a variety of ways, but it is most commonly used by photographers to retouch, correct and manipulate their images. High prevalence of CTX-M-15-producing Escherichia coli in healthy Swiss cattle and its potential to disseminate in cattle production chains. We investigated the prevalence of CTX-M-15-producing Escherichia coli in healthy Swiss cattle. Additionally, we studied a Swiss periparturient and an ongoing gastro-intestinal outbreak in cattle that were housed in high-risk production facilities and linked to the index case. CTX-M-15-producing E. coli were detected in 8.6% of healthy Swiss cattle (73/850) and in 53% of diarrhoeal dairy cows (48/92). Common PFGE profiles (P1, P2, P3, P4, P5, P7, P8, P10, P11 and P13) were found among E. coli from both healthy and diarrhoeal cattle. We conclude that healthy cattle in Switzerland may be a reservoir for the spread of CTX-M-15-producing E. coli. The potential for dissemination via animal products in Switzerland is important to consider for food safety. india Updated: Oct 06, 2019 19:06 IST As many as 20,000 people may have lost their lives in the ensuing mayhem caused by the Pulwama terror attack carried out by Pakistan-based Jaish-e-Mohammed (JeM), the Indian Army is now investigating whether the toll could be as high as 25, defence minister Rajnath Singh said on Saturday. "Let me clarify that we have changed from 1,000 to 2,000 in the revised figure," Rajnath Singh said when asked whether the Army had taken into account the addition of civilians to the list of people killed in the February 14 attack. This was his first formal statement since the attack. Singh said the Army is examining the background of all the 24 soldiers who lost their lives in the attack to get to the cause of the terror. "We would give facts and figures whenever people raise questions about the suicide attack. However, it would not be appropriate for me to make any prediction on the final figures till we get to the bottom of things," Singh said. The February 14 attack, the deadliest terror strike in Jammu and Kashmir, left 40 jawans of the CRPF in the Pulwama area with severe injuries. Pakistan-based JeM claimed responsibility for the attack, a day after the

Dual protection against sexually transmitted diseases and pregnancy with lopinavir/ritonavir and doxycycline. Antiretroviral therapy (ART) reduces the incidence of pregnancy and HIV transmission, but risks of adverse effects of antiretrovirals and of development of drug resistance are greater than the benefits. Preliminary data suggest that combined ART and doxycycline reduces HIV transmission better than ART alone. To establish whether the dual protection of ART combined with doxycycline would be feasible and cost-effective in resource-poor settings. A Markov model was built to estimate the cost and outcomes of the dual protection strategy compared with ART alone. In the base case analysis, the dual strategy would avert 6853 HIV transmissions in Africa, of which 688 would be in sub-Saharan Africa. Annual incidence of HIV-related death and illness would be reduced by 0.92 and 0.43 per 100 person-years, respectively. Ten-year ART costs would be US\$640 million, four-year course of doxycycline US\$3.60 million, and four-year added contraceptive use US\$136 million. Incremental costs-effectiveness ratio for a dual strategy compared with ART was US\$9.54. For a typical patient, the dual strategy could provide US\$2.05 in discounted life-saving utility and US\$1.28 in discounted quality-adjusted life-years compared with ART alone. Considering gross national income per capita, the dual strategy would improve health equally effectively at a much lower cost than would ART alone. Whereas ART is currently the most widely recommended strategy to prevent HIV transmission, ART-doxycycline combination could be a highly cost-effective and safe alternative in resource-poor settings. [Lymph node dissection in gastric cancer]. The significance of regional lymphadenectomy is still under discussion. The oncological treatment of localized gastric cancer has obviously changed with the new histopathological classification and it could be not attributed to a true improvement in the patient survival. The dissection of gastric cancer lymph nodes in clinical practice is carried out by surgeons only and not defined by the guidelines. The main reasons of not performing lymphadenectomy are the local complication risk and the actual doubts about the improvement in terms of oncological treatment. Many studies did not find any improvement in terms of patient survival, even in localised gastric cancer. In an intermediate stage, the dissection of perigastric lymph nodes can be useful in
