The tutorial below can help beginners get started with their first Photoshop project or get the creative juices flowing. 1. Create a new project Open Photoshop Elements, click File > New, and select a new Photoshop or Photoshop Elements document. You can find the templates here. After creating a new document, you need to select the desired format of your image. Photoshop and Photoshop Elements come with many interesting templates. Browse through their pages and select the one you want to use. The 3D Vase template is an excellent choice for a 3D flower or vegetable. To create your image, you can either zoom in on the image or work in the Preview mode. For the 3D Vase template, select an image of a real flower (or vegetable) and place it in the center of the canvas. Click on 'File' and click 'Image'. In the 'Image' dialog box that follows, click 'Full image'. You can now change the size of the canvas by changing the 'Width' and 'Height' fields. To convert

your image to greyscale, click on 'Image' and click 'Adjustments'. Click on 'Colors' and change the 'Type' of your image to 'Greyscale', and select a color to make your image grayscale. If you want to have your image on a white background, click on 'Artboards', and select 'Artboard 1'. Click on 'Arrow' and change the 'Blend If' function to 'Overlay'. Click 'File' and 'Save for Web'. 2. Replace the details of the image The 'Size & Position' and 'Lock & Fill' options are important for designing images. Click on 'Image' and click on 'Adjustments'. In the 'Artistic' tab, click on 'Image' and select 'Resize Image'. You can now change the size of the image by adjusting the 'Width' and 'Height' fields. Click on the image to place it in the center of the canvas.

Q: Por que a query ajax não funciona Estou fazendo um sistema onde vou tentar pesquisar alguns pontos na base de dados com muita frequência, eu preciso pegar todas as imagens de uma determinada categoria. A melhor maneira para fazer isso é utilizar o método GET ou POST, onde é possível carregar tudo de uma vez, então utilizei o método AJAX GET. function
exibirFotos(id) { \$.ajax({ type: 'GET', url: 'view.php', data: {id: id}, success:
function(result) { \$('#box').html(result); } }); } Só que ao passar isso, todos os
erros que eu alguém apontava como problemas de autenticação são resolvidos
(porque uso o CEP) e o problema é que eu consigo carregar normalmente.
Como dizer para o método que não deve fazer nada? A: Resolvi o problema da
seguinte maneira: 1- Para só carregar a primeira requisição utilizei o diretório
home, e como só seria uma requisição não vai precisar colocar o código para
cada requisição. 2- Quando defino se uma requisição tem ou não cache, se ela
tem ou não sinaliza que ela precisa fazer a requisição, então com base nesse
código coloquei um if e não houve nenhum problema na requisição. function
exibirFotos(id) { \$.aj
