The motherboard in an AMD Athlon XP is different than the motherboard in an AMD Athlon XP/MM. This difference is because an

Athlon XP/MM, also known as Athlon 64, is a dual-core processor and the Athlon XP is a single-core processor. The difference between the motherboard is that the Athlon XP uses Direct Media Interface(DMI), whereas the Athlon XP/MM uses Accelerated Graphics Port (AGP) for graphics. In addition, the Athlon XP's motherboard needs one PCI-E slot, whereas the Athlon XP/MM's motherboard needs two PCI-E slots.Q: Setting up logging for Android in eclipse I have tried to follow the guidelines for logging from android developer website. I have added the logging package in my project and have set a method called testLog in main. The method is never called. I have followed the instructions in logcat. I have also tried the Android SDK logging library which also does not work, even though I have tried the same thing as with the logging package, creating a logging method and trying to call that. A: You have to define the Log class in your own package, and you also have to add the log and logv file in the resources folder of your project. A: This guide works:
