Report Tool For Cisco Unified Comms Crack+ (Latest)

Cisco's Report Tool for Cisco Unified Communications helps you produce professional-quality reports for your Cisco UC server in minutes - a task that previously required many hours. Reports can be scripted and generate high quality, professional reports. All reports are customizable. The Word report can serve as the base for a comprehensive audit or as-built report. The Report Tool for Cisco Unified Communications consists of a pair of software programs - the Report and the Sender. These programs allow you to provide individual or whole system reports and record data and settings from Cisco Unified Communications Manager (CUCM), Cisco Unified Communications Manager Express (CUCE), Cisco Callmanager (CUCM), or Cisco Unified Communications (Cisco Media Connect) and Cisco Unity Connection (CUC). Furthermore, the Report Tool for Cisco Unified Communications allows you to monitor and log data and settings for any aspect of your Cisco UC-client. You can also use the Report Tool for Cisco Unified Communications to record and extract data and settings from any of the aforementioned Cisco Unified Communications products and Cisco Unified Contact Center Express (CUCX 8) or Unified Communications Manager Express (UCC Express 8 and later) and Cisco Unified Communications for Voice Services (Cisco Media Connect) products. Report Tool for Cisco Unified Comms Features: • Reports can be generated for Cisco Unified Communications Manager (CUCM), Cisco Unified Communications Manager Express (CUCE), Cisco Callmanager (CUCM), or Cisco Unified Communications (Cisco Media Connect) and Cisco Unity Connection (CUC). • Enables you to record any Cisco UC client configuration and monitoring information. • Generates and generates reports in HTML format for easy viewing in a web browser. • Generates standard or customized reports for easy viewing in the MS Windows-based Outlook, MS Outlook Express, or Mozilla Firefox application. • Generates standard or customized reports for viewing in the MS Windows-based Excel or MS Excel Application. • Generates standard or customized reports for viewing in the MS Word application. • Captures any errors during configuration of your Cisco UC-client, including any problems encountered during installation or un-installation. • Generates simple text-based reports for each sub-report in the unified communications application based on information captured by the Report Tool for Cisco Unified Communications. • Supports Microsoft Excel, Word, and text-based reports. • The full Cisco customer support team is available to assist you at any time in the creation and use of the Report Tool for Cisco Unified Communications.

What's New in the?

The Report Tool for Cisco Unified Communications lets you generate preconfigured reports for Cisco Voice gateways, Cisco Unified Communications Manager (CUCM) and Cisco Callmanager. These reports can be scripted and generated on demand or saved as templates for future use. Once the report is generated, you can publish it to any device, archive it or delete it. Each report contains predefined configurations/requirements and can be emailed to a list of recipients or saved in a file. Reports are self-documenting and can be passed on to your IT or account management staff. The reports for CUCM, CUC, Windows Help files and Word documents can be exported and saved to a network share for distribution to your IT or account management staff. The user-friendly interface lets you select the items to include in your reports, simply choose the fields you want to include in your reports and enable or disable the fields. The reports can be generated within minutes. Reports can also be saved as templates and used for later reference. Reports can be used in an audit of the CUC architecture, CUC configuration, or a call detail record (CDR) based analysis of the CUC infrastructure.
