As a desktop application, AutoCAD requires a suitable computing environment, an interface that allows the CAD operator to interact with the program and a graphics display device. From inception, the CAD program has been designed for operation on a wide variety of operating systems and personal computers. Early versions were written in Assembler language and were shipped on diskette. The graphic display was initially a text-only screen and later supported a mouse cursor, drawing board, and a text-based menu system. Advertisement: AutoCAD is currently offered in three different versions: AutoCAD Drafting, AutoCAD Mechanical and AutoCAD Electrical. Each of these is available for use either as a stand-alone desktop application or for integration into Microsoft Windows or Mac OS X. Autodesk defines AutoCAD as "an application for 2D drafting and design" and distinguishes it from other CAD programs such as SolidWorks and others that are more specialized and are used by engineers in other fields. Like many other CAD programs, AutoCAD has been designed to solve specific problems associated with creating, viewing and modifying two-dimensional (2D) models. Its most common use is to model buildings, furniture, machinery and mechanical systems. History AutoCAD was originally designed by Tom Alonzo and Robert Alonzo, both of the Autodesk Design Group at the time. The first version was released in December 1982. The original version was shipped on a diskette, which was a bulky medium and required its own standalone application. Cisco Systems purchased Autodesk from its creators for \$120 million in 1992. For the next two years, Autodesk focused on expanding their business with new products, including Cadence. Autodesk's focus on new products was reflected in their 1990 annual report, which stated, "one of our most important corporate policies is to respond quickly to the market, and we have been very successful." In October 1992, Autodesk released a new version of AutoCAD to the public, based on an entirely new code base and the inclusion of many new features, including the ability to create 3D models and render them in solid colors. AutoCAD 3D Graphics (also known as AutoCAD 3D), with its new user interface, took a major step toward more integrated design. In 1994, the company released the first version of its new Animation product, which enabled users to animate models in 3D space.

History When Autodesk acquired Unigraphics in 1989, they combined the technical staffs of the two companies. They also entered into an agreement with Unigraphics to provide the bulk of Unigraphics' sales force. Commandlets The commandlets were a set of command-line programs that replaced the AutoCAD script language. They could execute other AutoCAD commands as well as actions outside AutoCAD. They were introduced in AutoCAD 2000. Some AutoCAD commands were converted to AutoLISP. AutoCAD commandlets were also available in AutoCAD LT. The commandlets were phased out in AutoCAD LT 2010 and moved to the scripting language, AWDL. CAD commands The commands provided by AutoCAD are divided into two categories: system commands and drawing commands. There are over 650 system commands. System commands are called directly from a command line, generally in the same way as DOS or Windows commands. Such commands have no specific meaning; they are there to support other AutoCAD commands. An example of a system command is rptdesk which creates a report based on a drawing. The system commands are separated into 15 subgroups. The drawing commands are often used to create or modify a drawing. Some examples of drawing commands are CADCreate, CADAssignCoordinates, CADOffset, CADOffsetPath, CADAddTag, CADJoinPaths, CADRemove tag and CADAutocad, used to start AutoCAD. Drawing commands Drawing commands modify or create a drawing. The complete list of drawing commands is available in the Help file. The drawing commands allow the user to create a drawing from the drawing template, edit existing drawings, create a number of drawings from the same model (based on templates), prepare a drawing for export, view a drawing, convert a drawing to other file formats, export the drawing to other formats, print the drawing, set drawing-related properties, manage drawings, register drawings and automatically create drawings based on a template. Template commands The command for creating a template is called CADAddTemplates, also called CADTemplate. A template is an AutoCAD drawing that contains a set of predefined commands for creating a drawing. Templates can be created by copying a drawing, editing an existing drawing and saving it as a template. Templates can also be created from a text file. Templates contain commands for creating a drawing based on a 5b5f913d15
