and locate the files you are looking for. It is an open-source software utility for Windows. It is fast, intuitive and includes an advanced feature set. Like most popular Windows file searching applications, it

is easy to use and quick to perform. The application offers a number of ways to locate the files you want. By selecting the Search Folder and clicking on the Search button, WindowsSearchStd

Portable will search for the selected folder and display the file names in a neatly formatted treeview. You can sort the tree by extension, file name, or file size. You can also search by looking for filenames that

contain a particular word, string, or set of words. You can look for file names that match all (case insensitive), all lower case, all upper case, numbers, or a numeric string. Advanced searching options are also

available, such as performing a file search in any of the areas of a disk partition, including the boot partition. You can also create additional search criteria such as searches in a specific section of a partition,

such as Microsoft Office files in Windows, Mac files in OS X, and MS Office files in Linux. You can also choose to use a Windows file search, a Linux file search, a Unix file search or a Mac OS X file

search, depending on the distribution you are using. The application automatically lists files matched by the search criteria you specify. You can sort the displayed results by any criteria. Screenshots Features
