Does an out-of-print piece of software legally permit me to use a CD to bypass copy protection and read the software? I'm looking at an OEM version of the Windows Vista retail edition. Can I legally mount the ISO image on a CD? A: Yes, as long as you have the right. There are laws preventing the distribution of any unprotected copy of Windows Vista, as Microsoft is a software provider and would fall under this protection. However, you as a consumer are not legally entitled to any copy of a Windows Vista CD. Therefore, you can legally copy the ISO onto a CD. However, you might want to read the licenses first, as some of them (or all of them) may forbid the commercial use of the protected copy of Vista.
