Photoshop Elements is a graphics editor for photo editors and hobbyists. It has a few of the same tools as the full version of Photoshop but is simplified for those who aren't necessarily looking for features such as layers, curves or gradients. Unlike the original Photoshop, Elements only has one mode to work in, although it's getting more powerful all the time. The tools Photoshop Elements can do are shown in the right hand panel of the screen, below the workspace. There are really only four main things you can do in Photoshop Elements: Manage images — edit/crop/resize/rotate/distort images. — edit/crop/resize/rotate/distort images. Edit image files — like the bitmap, PDF and GIF files. — like the bitmap, PDF and GIF files. Create files — create PNG, JPG and GIF images. — create PNG, JPG and GIF images. Duplicate and swap tools — Duplicate and swap out layers, turn layers invisible, crop and add text/watermark on an image. Tools Photoshop Elements can do Let's dive into what the essential tools are to use Photoshop Elements effectively. Managing Images Managing Images Cropping an Image Resize an Image Resizing an Image Resizing an Image Rotating an Image Rotating an Image Distorting an Image Distorting an Image Unsharp Mask Filter Managing Images The main part of the screen is where you will be working on your images. You can add, crop, resize, rotate, distort, reduce the size of your image and much more. You can add layers to your image to do some really intricate techniques. To access the main workspace you just click the large green circle at the bottom of the screen. To bring up the workspace just hover over the circle and a small pop-out menu appears. You can move and resize images in the workspace just like you would in Photoshop. If you just want to crop an image then it will just show you a selection tool overlayed on the image. To crop an image you just need to double-click and drag where you want to crop your image. Your image is also selected when you do this. To resize your image you need to drag the handles on the a681f4349e

The prime minister told the Times Higher Education Review that the government would like to stop students from going to university "cheap". It means that fees will now be limited to £9,000 a year and loans to £21,000. The decision to press ahead with the plans was taken in November after Mr Cameron was accused of betraying his pledge to cut fees to £6,000, as set out in the 2010 election. But it was unclear which party was the most opposed, with Labour and Liberal Democrats reportedly planning to table parliamentary motions of no confidence. The government's cap of £9,000 was announced in this week's spending review but will not apply to Welsh universities, although Welsh students would have access to maintenance loan from £1,000. Some universities already charge £9,000 a year in fees and will have the option of increasing their fees to that level. The government said the move would be of no consequence as it is introducing a "simple and straightforward cap of £9,000 for all universities". In a statement, Universities UK said: "UUK believes that any new government policy on fees must be accompanied by the commitment to maintain the £3,000 per year maximum student loans cost to individuals, the subject to the availability of funding, and also an end to student debt. "We look forward to working with the new government in building a stronger education sector and the sector would welcome a statement confirming these assurances." 'Delaying action' Figures released on Thursday by the higher education Funding Council for England (FecE) show that university borrowing for 2009/10 rose to £10.8bn, up 12% on the previous year. UK universities are adding £1.3bn to their existing debts each year, with universities in Wales, Scotland and Northern Ireland accounting for the bulk of the increase. Former universities minister David Lammy said Mr Cameron had "delayed action to deliver his one of his election promises". He told the BBC's Today programme: "I think there's been a huge failure of leadership. I think that it should have been his priority to have addressed the issue of student debt. "I think if that

Q: how to allocate memory for char data type I am new to C programming.I am doing a tutorial where I create a program to read a file and print the entire file. #include #include #include int main() { FILE * fp; char * line; int k; fp = fopen("C:\\Users\\john\\Desktop\\text.txt", "r"); if(fp==NULL) printf("File not opened.."); else printf("File opened.."); while(k==1) { fgets(line,40,fp); line = (char*)malloc(40*sizeof(char)); strcpy(line,line); printf("%s",line); } fclose(fp); return 0; } Here,my char string that I want to allocate memory for is 40 characters in size.But when I run the program it gives "Segmentation fault: 11".I know if I add "+40*sizeof(char)" to the statement it will work but don't want to do that. I am new to C so can someone help me to allocate memory for a string in C. A: you need to allocate the memory first int main() { FILE * fp; char * line; int k; fp = fopen("C:\\Users\\john\\Desktop\\text.txt", "r"); if(fp==NULL) printf("File not opened.."); else printf("File opened.."); line = malloc(40*sizeof(char)); while(k==1) { f
