Network Password Manager Free Download

Network Password Manager is a straightforward and approachable piece of kit which provides you with a user-friendly workspace for creating and managing a database with multipurpose passwords in a network. It does not comprise complicated features or configuration parameters, making it accessible to all kinds of users, even those less experienced with such software. User-friendly interface and settings The GUI is not visually stunning but easy to navigate. You can add a new entry to the list by specifying a name, login, password and URL. It is possible to attach files and write comments, manage records in multiple groups (depending on their type, such as business or personal), as well as edit their properties at any time. Handy tools for creating records and managing the database What's more, you can copy and move records to other categories, remove them from the database, export all folders to file and import them later, check the database for expired passwords, resort to a simple search function to track down records when working with a large amount of data, as well as to hide inaccessible records and folders. Configure program preferences easily Network Password Manager can be set to minimize to the system tray area for fast access. It can automatically check the database for expired keys at startup, and you can switch to another language for the interface. Furthermore, it is possible to create an exclusion list with file formats, indicate the maximum size for loading data, as well as define rules for the random password generator when it comes to the key length and characters applied (lowercase, uppercase, numbers, symbols). Evaluation and conclusion No error dialogs were shown in our tests, and the program did not hang or crash. It does not put a strain on computer performance, thanks to the fact that it needs a low amount of CPU and RAM to work normally. Unfortunately, the interface it not very attractive. Other than that, Network Password Manager features some intuitive options for managing a database with passwords in the network. UPLOAD TO CRAIG'S LIST OF TOP 10 SOFTWARE Software Features: - Import passwords from a text file - Export passwords to a text file - Sort passwords by most recent use (A to Z) - Sort passwords by least recent use (Z to A) - Sort passwords alphabetically (uppercase or lowercase) - Query files for matching passwords - Print matching passwords in ascending or descending order - Assign passwords to a group (e.g., users, aliases)

What's New in the Network Password Manager?

Network Password Manager is a straightforward and approachable piece of kit which provides you with a user-friendly workspace for creating and managing a database with multipurpose passwords in a network. It does not comprise complicated features or configuration parameters, making it accessible to all kinds of users, even those less experienced with such software. Network Password Manager Features: Add, edit and move records easily Add, edit and move records easily - no need to enter each name, login, password and URL separately, as they are all stored in the database. Copy and move records easily to different categories Network Password Manager supports copying and moving records to other categories easily. Configure program preferences easily Network Password Manager can be set to minimize to the system tray area for fast access. It can automatically check the database for expired keys at startup, and you can switch to another language for the interface. Furthermore, it is possible to create an exclusion list with file formats, indicate the maximum size for loading data, as well as define rules for the random password generator when it comes to the key length and characters applied (lowercase, uppercase, numbers, symbols). Manage databases with over 150 passwords in one place Only a single database can be created in Network Password Manager, and you can have more than 150 records and 15 passwords in total. An unlimited number of records can be placed in a group, and each record can have up to five entries of which the URL is optional. Lifetime for each record Each record in the database is protected by a password that can never be deleted. You can change the password or remove it at any time. Keyfile for each record Network Password Manager uses hardcoded keyfiles for generating the keys, which means that no key can be decrypted until the keyfile is used. In order to protect and verify the confidentiality of the key files, a password is required. Convenient sorting for folders and records Network Password Manager can sort the folders and records in the database by ascending or descending order of the logins and passwords, alphabetically or according to record date and time (from the most recent to the least recent), and the most recently changed record is displayed first. Attached files to be opened automatically Every record in the database has an attached file that opens automatically when you click on its name. Search function for data in the database Network Password Manager allows you to search for records, as well as for logins and passwords, from all your network
