---

infected file can be downloaded automatically from the Internet and then injected into the execution. 4) The infected file can be downloaded from the Internet, stored on a diskette and then injected into the execution. What netsky-P can do: 1) The program reproduces itself on all the storage media on which it is found. 2) It runs in the 'system' processes of the Local Area Network. 3) It runs in the 'system' processes of the network. 4) It receives commands from the Local Area Network. 5) It is able to collect and send information from the Local Area Network. 6) It is able to send information from the Local Area Network to the Internet. 7) It is able to receive from the Internet. 8) It is able to receive and collect information from different external hosts on the Internet. 9) It is able to receive and

---

collect information and send information at the same time. 10) It can bypass the security systems of different operating systems in order to achieve its own goals. When Netsky-P detects the presence of a virus, it carries out the following: 1) Prevents the execution of different application programs and the infiltration into the system. 2) It checks the whole memory of the system. 3) It removes the virus from the local hard disk and from temporary and internet paths. 4) It checks the network drives and internet files. 5) It deletes the virus files from the registry and from temporary internet files. 6) It checks the infected hard disk and removes the virus files. 7) It deletes the virus files from temporary and internet paths. 8) It deletes the virus files from the registry. 9) It removes the virus from the system folders. 10) It deletes

---

the virus files from the temporary internet files. 11) It checks the registry and the internet files. 12) It deletes the virus files from the temporary internet files. 13) It deletes the virus files from the registry. 14) It checks the registry and the internet files. 15) It deletes the virus files from the temporary internet files. 16) It checks the 6a5afdab4c

Yes Antivirus-Tool Netsky-P is a free utility that removes automatically the virus netsky-p from the infected computer. Just click the scan button and a few seconds later the search result will be displayed. If the computer is infected, the tool restarts the computer in safe mode, removes the virus and restarts back to normal mode. NOTE: If you want to scan for the virus you need to press the "Computer Scannen" button, because the program comes only with the german language Virus example:  
Netsky\_P.bt.js The scam virus is identified as Netsky\_P.bt.js virus. The infection causes damage to a computer's registry. You may be infected by this virus if the following two conditions exist: 1. You try to download a

---

harmful file from a malicious website. 2. You install a questionable software. This virus can help you to perform some harmful activities:

1. The virus can delete important files on your computer, which will cause your system to become unstable.
2. The virus can redirect your browsing to malicious websites.
3. The virus can delete important data on your computer, which will also cause your system to become unstable.

You may find it hard to remove this virus from your system. That's why here on [SpywareInfo.com](http://SpywareInfo.com) we recommend to use the right removal tool.

Virus example: Netsky\_P.script The scam virus is identified as Netsky\_P.script virus. The infection causes damage to a computer's registry. You may be infected by this virus if the following two conditions exist: 1. You try to download a harmful file from a malicious

---

website. 2. You install a questionable software. This virus can help you to perform some harmful activities: 1. The virus can delete important files on your computer, which will cause your system to become unstable. 2. The virus can redirect your browsing to malicious websites. 3. The virus can delete important data on your computer, which will also cause your system to become unstable. You may find it hard to remove this virus from your system. That's why here on SpywareInfo.com we recommend to use the right removal tool. Virus example: Netsky\_P.rt.js The scam virus is identified as Netsky\_P.

**What's New In Yes AntiVirus-Tool Netsky-P?**

Antivirus Tool Netsky-P lets you scan for all possible viruses and spyware from one

---

interface! Using netsky-p you can scan for the virusnetsky-p in the computer with a mouse click. The scan is initiated directly when you want to scan and is canceled after a few seconds. Netsky-p will scan your computer for all viruses including spyware, trojans, backdoors, worms, keyloggers and several other nasties. Please note that a preview of the files found will be shown. You need to confirm that the discovered threats were actually removed by clicking on the button "Confirm file removal." Netsky-p automatically searches all the important folders and files for the presence of viruses. When it has found a virus Netsky-p will terminate it and log the file or the folder on which the virus was found to the quarantine files. Using Netsky-p you also have the option to disable or delete the quarantine files

---

to totally eliminate the found threat. You also have a configuration option that lets you monitor all the files and folders that Netsky-p finds. With this you can manage all files and folders that you found are not infected in the quarantine files and delete them manually. You also have the option to remove all quarantine files that Netsky-p deleted to completely remove all the viruses and spyware found. Netsky-p is easy to use. You can also use the "Stop Quarantine File Scan" or the "Quarantine File Scan" buttons which will stop Netsky-p before it deletes all the malware files, and when Netsky-p completes scanning you will have the chance to review the results and then to delete the malware files. With netsky-p you will never have problems finding new viruses and spyware. Please note that Netsky-p will not "repair" all

---

possible infections, only the infections that Netsky-p has found to be present on the computer. YES AntiVirus-Tool Netsky-P is a free utility that removes automatically the virusnetsky-p from the infected computer. Just click the scan button and a few seconds later the search result will be displayed. If the computer is infected, the tool restarts the computer in safe mode, removes the virus and restarts back to normal mode. NOTE: If you want to scan for the virus you need to press the "Computer Scannen" button, because the program comes only with
