What's New in the Movkit Batch Video Converter Pro?

Movkit Batch Video Converter Pro is an application that can turn video files (e.g. AVI, MKV, RM, MP4, MOV) into AVI, MPG, WMV, RM, MOV, MP4, 3GP, 3G2 and FLV. But it can also prepare items for Archos and Creative Zen Vision devices, among others. Loading up the videos in the application is an easy procedure that can be done through the file browser. An easier way would have been the "drag and drop" function but it is not

supported. It is possible to create a queue and process multiple items simultaneously. The file list offers details about the source path, size, duration, target format, status and estimated size of each item. If you are satisfied with the default properties, then you can directly initialize the encoding procedure by establishing the output destination and file type. Skilled users can tinker with the audio and video settings when it comes to the resolution, frame rate, codec, bit rate, variable bit rate, size, frequency and channel mode. Plus, you can create a new profile but you cannot restore these values to default. Furthermore, you

can preview videos in a built-in media player, select the default decoding mode, set Movkit Batch Video Converter Pro to maintain the aspect ratio or to disable the audio stream, as well as crop clips. The video conversion tool runs on a high amount of system resources, has a good response time and finishes a task quickly. It delivers a fair image and sound quality. No errors have popped up throughout our tests and Movkit Batch Video Converter Pro did not freeze or crash. Unfortunately, you cannot specify the thread priority or minimize Movkit Batch Video Converter Pro to the system tray. Similar Software of Movkit Batch
