What's New In Current Time Designator Portable?

Current Time Designator Portable is a small software application designed specifically for helping you check out the time and date in a small window. Portable running mode This is the portable version of the utility which can be dropped on USB flash drives or other portable devices so you can have it with you all the time. It does not store entries in your Windows registry so you can get rid of it using a simple deletion task. Gaining access to the program's features requires only opening the executable file (as there's no setup included in the process). Simple looks The application adopts a minimalistic layout that integrates only a few options. There's no support for a help manual, only a 'Readme' file that includes succinct details about the tool's key features. Monitor time-related aspects The application gives you the possibility to check out the day, month, year, week day, and time in hours, minutes and seconds. You can also get details about the runtime of the utility, namely number of years, months, days, hours, minutes, and seconds. What's more, you can make Current Time Designator Portable scroll the text displayed in the main window, alter the size of the panel, change the text font, modify the window position, as well as adjust the screen buffer size. Last but not least, you can set up the colors of the screen text and background by selecting between several preset values. Bottom line All things considered, Current Time Designator Portable delivers a simplistic approach for helping you view the time and date. On the downside, it doesn't bring anything new to the table and come packed with support for advanced features for helping you set up reminders with audio notifications. Over a period of 10 years, from 2001 to 2011, Current Time Designator Portable (hereafter CTDS) allows you to check out the time and date in a small window, monitor time-related aspects, and make the hours, minutes, and seconds appear in the system clock. Current Time Designator Portable offers: * the ability to check out the time and date in a small window * the possibility to monitor time-related aspects such as day, month, year, week day, and time * the ability to check out the time in hours, minutes, and seconds * the possibility to monitor the runtime of the application * the ability to adjust the text font, window position, and screen buffer size * the option to have the current time and date displayed in different colors * the ability to set up the "Notes and Reminders" window to show only when needed * the ability to set up reminders to be played back with audio notifications * the ability to set up reminders with a specified date * the ability to check out how the current
