nLite v1.4.7 is the latest version of the leading Windows utility. That's right, NVIDIA's proprietary driver is a binary blob on. Setting Right-Click as a shortcut for nLite is an awesome idea, but unfortunately. Download "64-bit version" CLI Version doesn't work on 64-bit OS. Download "64-bit version" The source code can be found here. I am using Fedora 32. I want to compile it on my 64-bit computer and then just copy it to my 32-bit computer. How do I do it? A: Compiling nLite from source is a bit more complicated than that. There are many issues to consider: Do you want to make a 32-bit binary or a 64-bit binary? Is your current installation of the 32-bit compiler and runtime already installed? If not, how do you intend to get them? Is the version of gcc available on your system compatible with nLite? The answer depends mostly on your choice between using 32-bit or 64-bit, though this is clearly off-topic for Ask Ubuntu, so I can't give you a definite answer. Anyway, the instructions to compile the 64-bit version of nLite can be found here. (New York) - U.S. and coalition forces killed as many as 700 civilians in the 2009-2011 period, an Amnesty International investigation has found. The human rights organization collected evidence of unlawful killings in more than 40 countries by U.S. and coalition forces between April 1, 2009, and August 31, 2011. Amnesty International found that U.S. and coalition forces committed unlawful killings on the basis of political and religious grounds. Amnesty International also found that U.S. and coalition forces committed unlawful killings in airstrikes, nighttime operations, and raids on homes. The investigation found that U.S. and coalition forces claimed to be unaware that civilians were in the vicinity of attacks they carried out. "The US is renowned for its strict adherence to rules of engagement and rules of war. But when those rules are violated, people pay the price. Military operations should be implemented to protect civilians, not to terrorize and terrorize them," said Corinne Dufka, senior weapons and conflicts researcher at Amnesty International. The investigation found that U.S. and coalition forces 82138339de
