Action and adventure seem to be the new buzzwords in the gaming industry. Even though many games do not reach that desired action and adventure atmosphere, it seems like we are spending a great deal of time preparing for our next adventure. What could be more exciting, then, than spending the entire week of Thanksgiving surrounded by the closest friends and family while taking a few days to have some excitement in different parts of the country and watch some football? The Joy of Gaming – Every Year If we had the luxury of taking a break for the entire Thanksgiving week and just go to different parts of the country to take a few days to watch some football, what would we do? There would be so much to do! One thing that is important to consider is how the weekend would feel. While we would be spending Thanksgiving in the same state, the only change would be that we'll be attending a football game and not preparing for our next one. While we prepare for the next one, the holiday week would be one of friendliness and good feelings. An Objective of Thanksgiving What is it that we would gain if we decided to spend Thanksgiving in one specific state and watch a football game in another? We can always find some time to plan for our next game. That is the problem with some of us – we are so busy planning our next game, that we forget to enjoy the current one. During the holiday week, we'd have time to watch football games and spend time with family and friends. It seems that each year, we spend more time preparing for the following year. In fact, we spend more time preparing for another game in the same year than enjoying the game that we have planned for the next year. A new game could be out there, waiting for us. In fact, it could be completed and ready for us to play, but we'll have to wait until next year. Now how can we enjoy the game that we are playing right now if we think about our next game? Well, we can also enjoy the game that we are playing right now. November 2010 – Keeping the Games Going This year, several video games are releasing in November. There are three Star Wars games coming out that month – Jedi Knight II: Jedi Outcast, Jedi Knight: Mysteries of the Sith and Star Wars: The Clone Wars. Also, Elder Scrolls IV: Oblivion and The Elder Scrolls Online will be released that month as well. So, how

You are likely to see the Graphics icon in almost any Windows installation - Be it the left-click menu, toolbar, or even the Windows desktop. This icon is certainly a cornerstone of Windows, and for good reason too. The Graphics window offers a broad selection of tools which can be used to edit and manipulate graphic data that, according to Windows, are probably the most important to a user. There are only two problems with this tool: it's often smaller than you'd like it to be, and it has a rather ugly design. In this article, we'll show you how you can fix that - With a themed skin! NVIDIA Windows Media Player 10 Media Module Skin Screenshots: The NVIDIA Windows Media Player 10 Media Module Skin has been tested for viruses, spyware, adware, trojans, and was found to be 100% clean of any form of malware. The Hamer and Mitchell hypothesis has come under heavy fire from critics who argue that coal has not been a major factor in climate change. It says 'widespread promotion of the view that industrial and post-industrial society has become the primary cause of climate change is an example of misinformation'. But a new paper published by researchers from Lancaster University in the UK, who used detailed information about global coal production and coal imports, reveals that China is the main culprit. 'Faced with rising coal demand as its economy continues to grow, China has taken significant steps in recent years to reduce its emissions, most notably by targeting emissions from energy intensive industries in metallurgical and cement production,' the authors write. 'Although these reductions are very significant, they are not large enough to compensate for the rise in demand, largely due to the growth of electricity use in China. 'The recent fall in coal demand in China is therefore partly due to policy-induced changes in the demand for coal and reflects a recognition of the need to reduce emissions as well as the rising cost of producing energy from coal.' The study also notes that China and India have been the 'dominant drivers of coal demand' and that the UK has not kept pace in developing the renewable energy infrastructure required to replace coal consumption.

NVIDIA Windows Media Player 11 Media Module Skin provides NVIDIA fans with a tribute skin for their Windows Media Player. NVIDIA is one of the two remarkable GPU (Graphics Processing Unit) manufacturers in the world and it is no surprise that someone thought of creating a WMP skin featuring the black and green base colors. Once you have installed the NVIDIA Windows Media Player 11 Media Module Skin, opening your Windows Media Player turns into a mesmerizing experience including both visual and audio high-quality effects. The first thing you might notice is the outdated logo of the company and, for real fans that can be seen as a drawback, while the nostalgics would have no problem with it. The compact interface features a carbon-like finish with great attention paid to details. It is almost perfect and the blend of colors delivers a very nice touch that excites the eye in a pleasant way. The playback animation depicts a horizontal electric-green lightning accompanied by aurora borealis themed shadows. The exquisite presentation also offers a vertical approach to the progress bar. Choosing to open the playlist instantly changes the tiny GUI into a more breathing entity that, although it takes a whole lot more of your workspace, allows you to quickly and easily manage the music you select to listen to. The good news here is that NVIDIA Windows Media Player 11 Media Module Skin's alternative look can be resized to fit any gap in your desktop area. The compact view mode does not come with such option. The incorporated equalizer helps you rapidly choose one of the many presets and even create one of your very own liking by tuning the available nine bands. On the downside, the EQ also packs crossfading capabilities that can prove a little tricky sometimes as they tend to block the music from playing. Scrolling the audio presets is also painful, with no accessible list for easy picking. The bottomline is that NVIDIA Windows Media Player 11 Media Module Skin addresses only a selected bunch of users, NVIDIA fans or not, that utilize WMP as their default media player and also have a certain inclination to tech skins with neon glowing lights and green, lots of green... and black. NVIDIA Windows Media Player 11 Media Module Skin Description: Tons Of Animation is a new Disney-themed fan skin from Blackfrost. The skin is vibrant and colorful and it adds tons of animated visual effects to your Windows Media Player. "The main focus of this skin was to bring a new experience to the Windows Media Player user. Giving the player a new interface which delivers an interactive and
