I loved the books - or I thought I loved the books. I mean, they're really really good books. I found them very compelling - and that's saying something - but I didn't really see the point of the story. I thought (perhaps naively), that the books were just a bit of fun, and I enjoyed them because they were entertaining. The TV series was a different experience. At first, I didn't really enjoy the series, even though I found it very well written. I thought the series was doing a disservice to the books by departing from their core story - which is a story about a battle for the Iron Throne of Westeros. I had to abandon a lot of things in the books which I liked, just to make the series more interesting. I didn't get the point of the main character being a dwarf. I didn't get the point of Daenerys Stormborn and her dragons. The story really left me feeling that the series didn't have a strong centre or point. In time, I came to enjoy the series. And I think the series has a centre: an examination of human nature - how people are what they are, and how humans are selfish. I think this moral of the story is spot on, and it's one that I think applies to many areas of human endeavour - the way we treat other people is often a lot like the way we treat ourselves. And I think it's a lesson that many of us need to learn. I think Game of Thrones has a happy

Start off by clicking the Menu button located on the top left side of the application window. From here, you will find the option "Manage Mobsters". Under "Add Mobster" you will be able to see the seconds and minutes of the current session as well as the timer settings. With that, you are now free to add a new session. To do so, simply pick a timer from a suitable list and click the "Add Mobster" button. The application will then ask you to decide on the programmer's name. The name will appear on the top right corner and they will be automatically added to the timer's list.
