History AutoCAD 2000 Autodesk acquired Cadsoft as part of the ill-fated 2000 acquisition of GIScience. Cadsoft was responsible for several products including MSPaint and Painter. In 2000, Autodesk re-released MSPaint as AutoCAD 2000, a freeware application that incorporated the feature set of the original Release 12 version of AutoCAD. Autodesk announced the first AutoCAD release on September 26, 1987. Initially AutoCAD offered only line drawing functionality and was priced at \$18,000. Version 1.0 was discontinued on July 26, 1990. The first version of AutoCAD that was available for sale was AutoCAD R12, the latest version released at the time. Autodesk re-released AutoCAD R12 on August 25, 1999. AutoCAD R12 includes a number of technical enhancements and was a launch application for Windows 2000. The new release was successful. It was followed by a number of upgrades as new features were added and existing features enhanced. While AutoCAD R12 was designed to work on Windows 95 and Windows NT 4, Windows 98 and Windows 2000 were added later as supported operating systems. AutoCAD R14 was released on September 20, 2001. AutoCAD 2005 AutoCAD 2005 was a release released in 2005 that extended the functionality of the software, with major new features including VectorWorks 2005 compatibility, the ability to create images from any file format, its own watermarking tool, better support for 1-to-1 correspondence, and a new look and feel. This release included significant changes to some of the underlying tools, and the use of a new DWG format. AutoCAD 2006 AutoCAD 2006 was released on March 7, 2006. The release featured a new look and new user interface, new drawing tools and features, and a major overhaul of the drawing and project manager features. The release used the new AutoLISP programming language to support third-party add-ons. AutoLISP was an AutoLISP extension of the Visual LISP language. The old Visual LISP was also available and could be used alongside AutoLISP. On June 15, 2006, AutoCAD also released a new product, Auto a1d647c40b

Q: Android, Google maps - can't zoom out enough to show all lat long values in a drawable I'm using the Google Maps API v2 to display a map. It works great, but I have an issue: Using only one google map view. When I zoom in, I need to see all the latitude and longitude values. But as I zoom out, I can't see all the lat and long values in a drawable, there is always some space missing. Here are two images: Zoomed in: Zoomed out: What I need is a way to make it all disappear, like this: To make it more clear, my problem is when you zoom out, some spaces appear between the points and I need them to be all together. A: You can use a GoogleMapOverlay to overlay the map and fill it with markers. The GoogleMapOverlay class is found here: You can use it like this: mGoogleMap.setOnMapLoadedCallback(new OnMapLoadedCallback() { public void onMapLoaded() { mGoogleMap.setMyLocationEnabled(false); mGoogleMap.getUiSettings().setMyLocationButtonEnabled(false); LatLngCenter = mGoogleMap.getUiSettings().getMyLocationButtonLocation(); LatLngCenter = mGoogleMap.getUiSettings().getMyLocationEnabledLocation();

But if two graduate students publish similar papers, why are there some opinions that a student's one PhD should not be counted as two PhDs? For example, suppose there are a student and his or her supervisor publish a paper. They are counted as one PhD because they graduate together. But if another student and his or her supervisor publish the same paper, would that be counted as two PhDs? And if the two students are not a student and his or her supervisor, would that also be counted as two PhDs? A: If the published papers are really close, then I would definitely say that it is counted as 2 PhDs. If they are different, and both are complete PhDs, then it does not really matter. This is also a very nice example of how different opinions may exist even in the same lab. CS, NA, UA, and MN were included. Thus, it was reasonable for the model to achieve satisfactory
