Q: How do I insert a variable into an assignment statement? I have been searching for an answer to this one for ages. I am trying to create a simple variable that acts as a kind of identifier, unique for each instance of the program. This is not working, if the line is pre-printed then the compiler doesn't read it, it just assigns a single character, and the "i" variable never gets set.

```
#include #include #include #include using namespace std; int main(){ string* i; i="the number is"; int i; vector vs; vs.push_back(i); vs.push_back("the unnesccary"); vs.push_back("third"); vs.push_back(i); vs[1].size(); cout
```
