

Who to contact... The internet is a great place to ask questions about language or other things but it is not a great place to get answers. You're likely to get answers to the people that hang out in this forum. The best place to get support is to pick up the phone and call the local linguistics department. I don't know what it is for you but you can find a list of linguistics departments and their numbers here: And finally, email linguistics listservs for more support. A quick google turned up: But those are useless for your particular situation, you need to know the name of your department in your particular country. A: The two main means of good audio are either direct talk-to-the-vocal-tip microphone in your headset, or a room microphone. I believe you have the room microphone. record from past crime for the purposes of recidivism screening; nor is there any evidence that such a record would provide otherwise unavailable information. The court permitted the defense to review at least one report. The discovery in this case covered approximately 95% of the material requested. 21 Appellant complains that the Government never moved in limine to prevent disclosure of the misdemeanor. The District Court is charged with balancing the prosecution's interest in disclosing all material relevant to guilt or innocence and the defense's interest in obtaining material for use in cross-examination of prosecution witnesses. The court in this case carefully balanced the interests in determining that the misdemeanor information could be disclosed with the understanding that it was extremely unlikely that the information would lead to evidentiary problems. We believe that this balancing was entirely proper. 22 Furthermore, appellant was not prejudiced by the order disclosing that the offense had been sustained. Apparently the prosecution still intends to bring an indictment for this misdemeanor. Even if the misdemeanor were to be removed from the case, appellant could still point to the fact that he had previously been convicted of a misdemeanor as evidence of untrustworthiness. The absence of an indictment for the misdemeanor

Or, well, you can find a real book around you. It's a small light weight book that changes colour and stays in your handsight, a handy little thing to toss onto a desk and. Hi there! Our new book has just come out! The Women of Barbra Streisand: My First Fifty Years in the Entertainment Industry will make you laugh. It will make you cry. And it might just make you want to open your eyes. It covers a lot of ground: Early Influences Dressing for Fame Hollywood and Beyond In this interview, Emma describes how she got the idea for the book, and what a young, overlooked Barbra Streisand meant to her back then. She also talked about her sources, and why she's so into Barbra's personal archives. 1.

Field of the Invention The present invention relates to a display panel and an array substrate, and more particularly, to a display panel and an array substrate capable of decreasing the color shift of a TFT-LCD (Thin-Film Transistor-Liquid Crystal Display). 2. Description of the Prior Art The traditional LCD is characterized by its features such as low power consumption, light weight, thin profile, low-radiation and low driving voltage. Accordingly, the traditional LCDs have been widely applied in small-sized portable electronic products, e.g. cell phones, and personal digital assistants (PDAs). The large-sized LCDs (e.g. LCD TVs) have been commercialized as well. Please refer to FIG. 1, which is a schematic diagram of a prior art LCD. As illustrated in FIG. 1, the prior art LCD 100 includes a display panel 110, a plurality of color-filter arrays 112, a plurality of thin-film transistors (TFTs) 114, a plurality of gate lines 116, and a plurality of data lines 118. Each of the color-filter arrays 112 corresponds to a pixel, and each of the pixels corresponds to a sub-pixel in the display panel 110. The sub-pixels are each provided with a corresponding TFT 114 and a corresponding gate line 116. In the prior art LCD 100, the sub-pixels of the display panel 110 can be switched by the corresponding TFTs 114 to reflect different colors to emit the color light beam. Please refer to FIG. 2, which is a schematic diagram of the display panel 110 and f30f4ceada
