Q: How to create generic with property of type `MemberInfo`? I'd like to create a generic method which creates all properties of a specific type and returns an IEnumerable. However, all the PropertyInfo instances are of MemberInfo type: protected

---

```
static IEnumerable  
GetProperties(IEnumerable  
fields) { return  
fields.Select(fi =>  
fi.GetValue(null) as  
PropertyInfo); }
```

The compiler doesn't allow me to specify T here. I think that I'm not understanding how generics work. Should I rather just create the method without generics and specify the generic arguments there? Or is there a way to tell the compiler that the type T is known and I'm just missing it?

A: You need something like:

```
public static IEnumerable  
GetProperties(IEnumerable
