Subsonic is a free, open source, cross-platform (Linux, Windows, Mac OS X) audio server, designed as a drop-in replacement for the widely used Icecast. It supports a wide variety of audio formats, including MP3, Ogg Vorbis, FLAC and Theora, but you can also use it to play some older formats if you have the right plugins installed. Using the included web interface, you can add and remove streams, change the streaming parameters, and add and remove tracks. You can also use the file selector to search for and play any of the music files that are on your computer or on a remote server. This is a perfect replacement for the very bloated and expensive Foobar2000, which has a high learning curve, requires a lot of configuration, and is impossible to use if you have a 64-bit operating system. It can also be a good alternative to Windows Media Player, which costs a fortune and is complicated to use. Subsonic is also very easy to configure, and doesn't suffer from the annoying bugs that plague Icecast. Subsonic is totally free, open source, and cross-platform (Linux, Windows, Mac OS X). Mumble is a VoIP application that allows you to make and receive calls to VoIP clients on Windows, Linux, Mac, Android, and iPhone/iPod touch. It's very easy to use and has a very simple interface. However, despite its simplicity, it's still highly customizable, allowing you to tweak just about every setting of the app. This makes Mumble a perfect VoIP client for users who want to change how their calls are made and received. You can also use Mumble to listen to VoIP streams, as long as they are compatible with Mumble's protocols. It doesn't matter if you're calling someone on the PSTN, use Skype, or use your VoIP services (such as SIP), Mumble can connect with any VoIP client that is compatible with its protocols. This is a great way to get to know a new VoIP application, and you can always convert any VoIP stream you're interested in listening to to Ogg Vorbis, MP3, Ogg Opus or Theora before listening to it with Mumble. Mumble is a VoIP application that allows you to make and receive calls to VoIP clients on Windows, Linux, Mac, Android, and iPhone/iPod touch. M
