The HIGHRESAUDIO HD streaming service is an incredible music streaming service that provides high-end audio quality at unbelievably low rates. The HIGHRESAUDIO HD service is a powerful audio player that offers access to exceptionally qualitative music, and pure, digital sound notes, via the online HIGHRESAUDIO

library and music store. The music streaming service HIGHRESAUDIO is a European service that enables access to high-quality music, exceeding standards imposed by today's ultra-popular music streaming services. By comparison, a CD is encoded at around 16-bit depth (usually, CD-quality is higher than digitally streamed music). In order to accurately transmit a song's full harmonic spectrum

(including all recorded instruments and fine notes), one would need to produce a bigger file, at a higher resolution. HIGHRESAUDIO aims to offer not only super-good but top-level sound quality, seven times and twenty-nine times higher than a CD's, respectively, an MP3's imposed standard. This content and service are specially made for professionals, enthusiastic listeners, and conscientious music lovers. At

these (almost impossible) rates, the music experience would be totally transformative. The client audio player The streaming app is super-simple and has a clean-looking GUI. The design and functioning are intuitive and stereotypical in nature. On the left side, there is the navigation menu for charts, personal and pre-defined playlists, filters, settings, and help files. In the center, there is the navigation panel. Opening

an album displays a list of all its tracks, the songs' details, and the playing/distribution options. The music player is simple and easy to use. It does not contain sophisticated filters, options, or commands. However, the most surprising aspect is the service's audio quality. It aims at offering 24-bit FLAC (Free Lossless Audio Codec) audio files. The FLAC format is compatible with almost all modern audio players and music programs,

and is expected to be a new standard in the music industry, the closest to a song's original form. The audio player successfully manages to play these types of files and to preserve their quality. Pure sounds and distinctive advantages To summarize, HRA Streaming App is quite a nice application that enables a remarkable listening experience. The program is neither good nor bad; it works

well and serves as an interface for the actual product, the online music service. So, if you are a music fan
