Feedback Send feedback: If you encounter any problem regarding the application or if you have any idea or suggestion that can be used to make the application better, please send your ideas or suggestions to the author(Yusuf.Harifi) or to msnversionproxy-dev@googlegroups.com Screenshots Other links msnversionproxy-dev: developer forum msnversionproxy-download: download source code msnversionproxy-bugs: bugs and feature request msnversionproxy-about: about the application msnversionproxy-wiki: wiki of the application msnversionproxy-fedora: Fedora rpm package link Category:MSN MessengerHuman biomonitoring of heavy metals in vadose zone soils in the Republic of Macedonia, North-West of Europe. The aim of this study is to estimate the levels of heavy metals (HMs) in soils and plants growing in the vadose zone (VZ) on the south side of the Skopje area (north-west of Europe) in order to know the extent of HM pollution. The soil samples and the plants growing in the VZ (wheat, maize and bracken) were collected in the areas contaminated with heavy metals or with different levels of HM pollution. The levels of HMs were determined by atomic absorption spectrophotometry. Soil samples were collected in four sites in the Municipality of Stari Grad (Belgrade), the first one in a zinc smelter area with high concentrations of Zn, Pb, and Cd in the soil, the second one in the area of a sewage plant, the third one in the area of a granite mining area, and the fourth one in the urban-suburban area. The levels of Zn, Pb, Cd, Cu, and Ni were determined in the samples of soils and plants. No statistical differences were observed in the levels of HMs in plants and in soils collected in all sites and not associated with anthropogenic influence. The highest concentrations of Cu, Pb and Cd

What's New In MSNVersionProxy?
