KeyMacro is an open source.NET framework that allows macros to be created and executed on desktop applications. Macros are also known as keyboard short cuts. KEYMACRO allows users to bind keys, either native windows controls or custom controls, to perform a series of actions. For example, the user may create a macro for opening a web browser, typing in a URL, then opening a specific web page. KEYMACRO is used as a key binding replacement for the ITaskService framework.

ITaskService allows applications to define keystrokes in a task based manner. This is a good replacement for key macro applications that predate Windows Vista, and also allow users to control the keystrokes from Windows itself. Requires: .NET framework 4.0 or above. This study aimed to investigate the in vitro antibiotic sensitivity of PA strains isolated from inpatients. A total of 259 isolates of PA were collected from clinical samples from patients hospitalized in four maternity hospitals of the city of Campinas in Brazil, in the period from December 2008 to February 2010. All isolates were subjected to Gram staining, biochemical tests (API 20NE), and antimicrobial susceptibility tests (Vitek-2) for 15 drugs. PA was isolated in all samples, and the most frequent isolate was *Pseudomonas* sp. (90.6%) followed by *Pseudomonas* sp. *Acinetobacter* sp. (9.4%). There was a predominance of strains that were resistant to ampicillin (100%), ampicillin/sulbactam (99.2%), piperacillin/tazobactam (91.5%), piperacillin (89.6%), and imipenem (87.4%). High rates of resistance were observed for ticarcillin/clavulanic acid, ceftazidime, cefepime, and gentamicin. The rate of resistance was low for ciprofloxacin and aztreonam (both 0.8%). There was no resistance to imipenem or meropenem. The results obtained were similar to those reported by the
