For MacOS: -- 1. Open your project file. 2. Hold down the mouse down on the main form. 3. Click 'info' on your keyboard. 4. Choose the folder 'outlook' under 'outputs'. 5. Open your forms designer. For Linux: -- 1. Download and install the components from here. 2. Logon to your Linux server. 3. Download the source code. 4. Execute the command 'bz2 -dT -xvf Outlook.zip'. 5. Run: 'cp -fRR Outlook/outlook /usr/local/tomcat/lib' 6. Go back to the source code. 7. Launch the project. 8. Open the forms designer. For MacOS: -- 1. Open your project file. 2. Hold down the mouse down on the main form. 3. Click 'info' on your keyboard. 4. Choose the folder 'outlook' under 'outputs'. 5. Open your forms designer. For Linux: -- 1. Open your project file. 2. Hold down the mouse down on the main form. 3. Click 'info' on your keyboard. 4. Choose the folder 'outlook' under 'outputs'. 5. Open your forms designer. Getting started =================== To

What's New in the?

·Customize your Outlook with the TAdvOutlookList component! ·Controls the style of Outlook ·Goes great with the TAdvOutlookControl component ·New in VCLB update 5.10 ·Help: ·Visit the Web site for more info. ·Author: Daniel Darule ·Genious@Rise.com ATTENTION! 1 - Read about the source of TAdvOutlookList. 2 - the TAdvOutlookList is a component that you can link to the main form (TForm) of the application (in other words, the component is associated with the main form). By modifying your main form properties or design (see the Properties Palette), you can change the position of the component. 3 - the TAdvOutlookList.ClassName is used to customize the appearance and the behavior of TAdvOutlookList. You can change the ClassName of the component without affecting the component's behavior (unless you modify the properties). Using TAdvOutlookList.StyleCss, you can change the appearance of the component without affecting the component's behavior. If you modify the properties of the component, you will affect the component's behavior. 4 - the TAdvOutlookList's properties are shared with other components. This means that changing the value of one property will affect other components linked to the same form. Using the TAdvOutlookList component, you can control the style of the Outlook program. It does not render. The appearance, including custom rendering of the component can be configured using the TAdvOutlookList.StyleCss property. ·New in VCLB update 5.10 ·Help: ·Visit the Web site for more info. ·Author: Daniel Darule ·Genious@Rise.com The TAdvOutlookList component is designed for use as a quick control for the style of Outlook. You can adjust the position of the component on the form, have it automatically sort the columns, change the appearance of the list, etc. The TAdvOutlookList component makes it easy to group a list of items. You can also customize the look of the list and have it automatically sort the
