The format represents the history of the repository in terms of the directory structure of the project as well as the activity of its developers over time. Gource is a tool that can be used for viewing and visualising the source code and that... Getkit is a fast, powerful code viewing and source control system. It is a great tool for development in VCS controlled projects. This is a free version that is only about as powerful as gitk. This project provides documentation of the design, implementation, and usage of the zynewb (zipl) extensible HTML renderer for the Zope Toolkit. The zipl renderer uses the markup syntax of the Zope 2.8 web layer. The documents describe the model, view, and controller classes, the view template syntax, and the zipl extension points. This project contains the zipl manual, the zipl source, and several example... A file archiver for Python. Currently works on windows only. Tested on PyInstaller compiled Python 3.3 on WinXP Gzip and Zip Archive handling in Python `Json.load()` is faster than `pickle.loads()` If you're looking for a drop in replacement for the standard Python archive handling modules this is for you! =====  
Gource is an animated web frontend for Git that allows developers to see all the development activity over time. It has various features such as auto-scrolling, auto-updating, time range selection, annotations, wikis, log search and many more. It is a web app using Webkit2s JavaScript API, Python and PHP. It also relies on Gource-gtk and Gource-mono to provide the UI.

Gource-Mono Description: =====

Gource-Mono is the new look of Gource, based on Mono 2.4 GTK+ runtime, it is not dependent on the WebKit2

JavaScript API, so can be used on all platforms (win, mac, linux). Gource-Mono is now integrated with Gource-gtk, a GTK# application written in C#.

Gource-gtk Description: =====  
Gource-gtk is a C# GTK# application that provides a simple to use interface for

Gource. It is not dependent on the web app and can be used in all platforms. If you are interested in the Gource source code, you can find it here: [To install Gource-gtk on your machine](#): If you are on Ubuntu, you can install it using the package manager. On Debian or Ubuntu based systems: `sudo apt-get install gource-gtk` On Mac: `brew install gource-gtk` On Windows: [Gource-Mono's API Reference](#):

=====  
Gource-Mono now

includes an API reference, that you can view in your web browser. Here are some features that are available from the reference: You can find out information about events of interest to developers. For example: - files are committed - commits are made - there are modifications - files are deleted

Gource-Mono uses Python 2.6.5 Python's modular design allows it to be extended in many different ways, including by third party developers. New features are added by the Python community, not by corporate entities like a C compiler vendor. This means that Python will remain a dynamic language and there is no single fixed implementation of Python that could

#### What's New In?

Gource is a program to visualise git repositories. The goal of Gource is to improve the quality and perception of any git repository. Gource has many useful features, including: The ability to display file changes over time The ability to display ascii art changes over time The ability to display file paths on the screen instead of line numbers, making the file path dependent and easier to follow The ability to display file/directory removals over time, allowing the viewer to easily see when a file was removed The ability to handle a multi-branch git repository The ability to display file renames over time The ability to handle a wide variety of directory
