The most recent version of AutoCAD was released in September 2016, and includes additional capabilities such as 3D modeling, vector graphics, graphics management and web services. Autodesk AutoCAD History [edit | edit source] Originally developed for the MIT CADS and Bell Labs Graphics System (later SDS), AutoCAD is based on the SDS-X architecture. It was originally designed to import a variety of existing drawings formats, including MicroStation, Cadmex, and PLOTGRAPH, and to generate output in a variety of formats. (The applet allows for viewing the input, but not for entering or editing.) The release of AutoCAD for Windows, in February 1986, gave the program a major new audience. AutoCAD was designed by Jef Raskin, who also designed the Macintosh Finder. Following his death in March 2000, AutoCAD and other products of his creation were sold to Autodesk. Autodesk acquired the AutoCAD design team from SDS in 1987. The team was led by Jon Allen, then director of technology, and Mark Austin, then product manager. In 1990, Autodesk introduced version 2.5 of AutoCAD. The company re-released version 1 of the program on the Apple Macintosh in 1992, and for Windows in 1994. An update to version 2.5 was released in January 1994, and the new version is named AutoCAD 2.5 Intuit (an allusion to the Intuit Turbo Tax program). The Intuit name was dropped in the final version of AutoCAD. In April 1997, Autodesk introduced version 4. The final version of AutoCAD 2.0, released in February 1998, was known as AutoCAD 2000. In the same year, a US-based version of AutoCAD named AutoCAD Architect was released, along with a simplified UK version named AutoCAD 2000 Architect. Also in 1998, Autodesk released a separate app, AutoCAD Map 3D, which was a first-person 3D-modeling app that used the same SDS-X and MIT CADS software architecture as AutoCAD. Autodesk released AutoCAD 2005, the first version of AutoCAD that works on the Windows Vista platform. AutoCAD released version 2008 in May 2007, and for Windows Vista and Windows 7 in November 2008. AutoCAD 2010 was

Programming with AutoCAD AutoCAD is one of a number of applications that are implemented using the ObjectARX library. Many features and objects found in AutoCAD have a corresponding class. For example, the Rectangle object is provided by

the RectangleClass, the Command object is provided by the CommandClass, the Layer object is provided by the LayerClass, etc. With this in mind, the user can easily create an object (an AutoCAD object, such as a tool, template, or command), and then write code to make it act upon the underlying model. This allows a user to create anything from a 3D view to AutoCAD's command palette. Programming for advanced users AutoCAD has an extensive API (Application Programming Interface), with over 5,000 functions and tools. The interface is based on the ObjectARX library, so most of these features are accessible via programming and automation. Some of these features are: Printing Customizing the ribbon Scripting Object-Oriented Programming (OO-CAD) Creating custom command types Creation of Windows and Windows Forms One of the most important features in AutoCAD is the creation of Windows and Windows Forms. The latter is where users work with workstation data, such as technical drawings and BIM. Format specification A format is a way of storing data so that it is understandable by another program. Many formats are based on a file system, in which certain fields represent certain folders. The data stored is usually text, and this is converted to text or binary data when the format is used. A.DGN file stores objects in a series of data tables. Text formats include Tagged Image File Format (TIFF) and Portable Network Graphics (PNG) for images, and AutoCAD's native DXF format. Binary formats include CAD Binary Interchange Format (CBIN) and Stereolithography (STL). CAD Binary Interchange Format is an encapsulated binary format that supports numerous models. It stores the geometry information and all models as binary data. Stereolithography is used for 3D printing in the manufacturing industry. Format standardization CAD standards usually require format specifications for files created by various types of CAD software. These are needed in order to standardize the file format, so that a person reading the file can recognize it as being correct. When storing data, different people may store 5b5f913d15
