An example of a link is the physical medium through which a communication link is established. In some implementations a link is a physical medium including a fiber optic cable, coaxial cable, a twisted-pair copper wire or a wireless medium. In some implementations the link may also include transmission techniques used to transmit data between different points. An example of such a technique is the use of wireless technology to transmit data. In such implementations, a link may include the physical medium, transmission techniques used to transmit data and, optionally, the modulation scheme of the transmission technique. A link may be considered as the physical connection between two points. The link may be a two-way link, allowing for bidirectional communication. Alternatively, a link may be considered a one-way link, allowing for unidirectional communication. In some implementations the link may be considered a connection. In some implementations the link may be considered an item. In some implementations a link may be a f30f4ceada
