Near Orbit Near Orbit is a science fiction novel by American writer Kim Stanley Robinson, published in 1989. Plot introduction Near Orbit is set during the late 21st Century. The author is a near-future archaeologist. The book begins with an introduction to the new galactic political and economic alliances the author and his protagonist become involved in during their trip around the galaxy. Plot summary The book follows the career of Pekka Tiemisten, a Finnish-American astrophysicist and near-future archaeologist, who sets out on a mission to investigate the Precambrian Era-level remains of an early alien civilization, on the far side of the galaxy from the Milky Way, and starts a long journey to find out whether the ruins really represent a "new frontier" for human exploration or if they have all been artificially created. The first half of the novel is set in the orbits of the terrestrial planets, where an archaeological expedition is investigating the ruins of a civilization that had left behind enigmatic artifacts. On Earth, the ruins of several millennia before have also started to affect the lives of people living around them: over the past years, the tides have increasingly become unreadable, the population is falling, and something even stranger is happening to the young. Meanwhile, in an orbit around the Sun, a "near-orbiting joint expedition" including all major powers starts to investigate the ruins, in particular to find out if they were the result of an ancient alien civilization or are artificially created. On Earth, the first signs of xenophobia appear: the world's governments are discussing how to respond to the "threat" of the alien ruins, and the political landscape is shifting, with particularly powerful or fanatical groups taking advantage of the situation. The plot then follows a mission to Venus to investigate the Martian ruins, and an expedition to Mercury to investigate the ruins of a now defunct (40,000 years ago) ancient alien civilization. The protagonist Pekka and his allies begin to suspect that the artifacts that they are studying on Mars have been designed to be the "excuse" for the construction of a hyper-advanced "Thule machine", a device first discovered on Saturn, some thousands of years later, by an equally advanced alien civilization. After their discovery, the Thule machine was taken back to Saturn and used to extend their empire to the stars. Structure The novel is written in several parts, which are divided into chapters and sub-chapters.

CARACAS, Venezuela — The battle for power between the United States and Russia in Syria may still be raging, but the sands of time appear to have run out for the country's dictators. In Venezuela, President Nicolás Maduro has issued an arrest warrant for his one-time mentor, the Russian President Vladimir Putin, for "aggression against the sovereignty and dignity of Venezuela." The warrant follows a recent offensive by the United States against Maduro's regime, with the Trump administration, in a series of sanctions steps, declaring Maduro's election last year illegitimate. The U.S. tightened sanctions again, this time targeting the oil industry, which remains controlled by the Maduro regime despite the country's devastating economic collapse. The sanctions have been widely condemned as criminal, since the vast majority of Maduro's citizens are now underpaid and starving. More than a dozen business people and ruling party members have been arrested, most on corruption charges. Maduro also declared himself a "traitor" of the Venezuelan people and vowed to continue to rule, despite the worsening crisis. "The U.S. government has plotted to foment violence against the government of Venezuela," Maduro said on state

television. “All actions taken by Maduro and his government will be considered an aggression against the sacred and indivisible union of Venezuela.” “The aggression against Venezuela is total and is backed by the most powerful imperialist country in the world and its allies, who want to come to the aid of corporate plunder from the Caribbean Sea to the Antarctic Ocean.” To challenge the U.S. sanctions, Maduro has signed his own financial “truth commission.” While the U.S. hasn’t backed down from the battle, Moscow appears to have strengthened Maduro’s resolve. It is believed that Russia has sent a large naval battle group to Venezuela in an attempt to protect Maduro from a U.S. attack. Maduro’s arrest warrant is but one of the many actions Russia has taken in support of the embattled leader in the past months. Russia has also increased military presence on Venezuela’s border with the United States, and has stepped up military training and communication between the two forces. Russia has also allowed Venezuela to purchase large amounts of critical food and medicine, saving the lives of countless
