

Precision Builder Express is designed to automate the compilation and distribution process of software products. Its capabilities are very well usable to automate any user defined tasks. Precision Builder Express is a professional product, that provides a comprehensive yet easy to use environment for the definition, management and running of automation projects - so called scripts. Each script is composed of various predefined action types organized in a logical structure that can be configured according to your script's needs. Precision Builder Express has a simple and easy to use user interface, that uses the standard controls of Microsoft Windows operating system. It provides the multilingual interface with full UNICODE support and with possibility to switch a language without restarting the application Actions can be designed, used and published with the help of Action library. Anyone can define and publish the action to other users. The core action type is the "Command-line execution", but there are also more special interfaces. Precision Builder Express offers a large number of predefined action types and the offer is extended every day, whether directly by the supplier, or by users of the product Note: Free for non-commercial uses only. If you want to use it for commercial purposes, you will need to purchase a license. What's new in this version: \* Version 1.2.1 \* Improvements: - added support for TIFF image type - added support for UTF-8 encoding - fixed a bug related to the remote logs What's new in this version: \* Version 1.2 \* Improvements: - fixed a bug related to the name of an automation project - fixed a bug related to the duration of the task - fixed a bug related to the rename action \* Minor bug fixes \* Changes: - now the compile action is working for remote execution as well - in a remote execution the "Rename" option is enabled by default (if a file exists, you'll be asked if you want to overwrite it, otherwise it will be renamed with a unique name) What's new in this version: \* Version 1.1.3 \* Improvements: - now you can create a new remote execution with a timeout option (this may help with a connection loss) - now if a file exists a confirmation window will be opened - when you run a remote execution with a timeout option, the application will exit if the remote execution is not finished (with exit code 0) \* Minor bug fixes

#### What's New in the?

The physical design of a system or device is defined by the process of how the system or device is constructed from different components. Creating a process in project management software can be difficult. It is important to get the process right first to avoid rework. That's why it's so important to know the difference between process and procedure. If you are new to project management, you may be confused between the two. What is a process? A process is a series of steps you follow as you work to accomplish a goal. Typically, a process is broken down into smaller steps. You can have multiple processes working together in one or more projects. What is a procedure? A procedure is the detailed steps to follow in order to accomplish a process. Procedures are also known as standard processes. A process might have a number of different procedures. Typically, procedures are used by designers and engineers to standardize the steps for any given process. If you are new to project management, you may be confused between the two. Precision Builder Express is designed to automate the compilation and distribution process of software products. Its capabilities are very well usable to automate any user defined tasks.
