Key Macros are a set of predefined actions that you can trigger via hotkeys. They can be used to add an emblem to your desktop, make a print or a copy of the current document, change the font color, highlight the selected text, etc. Here's how to configure them. MIDI Keymacro: You can easily manage your MIDI notes with the MIDI keymacro. It contains the presets used by different synth plugins. Each preset has an assigned MIDI note and the preset will appear as a button in the keymacro. EXIM Macros: With the EXIM keymacro, you can have the same hotkey for many actions: open a folder, start a new email, create a new document, call up the preferences, etc. There are icons for many of the themes in the Win7-Styles folder. The themes can be changed by clicking on the theme icon and choosing a different one from the folder. You can have more than one theme installed at a time. The icon on the desktop will disappear when the theme is not active. So, if you want the icon on the desktop, go to the WIN7-Styles folder and choose an icon. After that, right-click on the desktop and choose "Create Desktop Icon" from the menu. Notes on the Win7-Styles folder I have the WIN7-Styles folder in my C:\WINDOWS folder. The folder has a lot of themes and a lot of icons. All the themes are subfolders. So, for example, if I want the icon for the theme "Stormy", I would go to C:\WINDOWS\WIN7-Styles\Stormy and click on the icon. When I want to replace a theme, I do the following: I go to the WIN7-Styles folder and choose the new icon I want. Then, I delete the old theme and replace it with the new theme. You can go to the WIN7-Styles folder from the Desktop folder. If you have a desktop folder icon on your desktop, it will look like it's a folder. If you open it, you will see the WIN7-Styles folder. I have tried these themes and they are very nice, easy to use, and to look at. The program works on Windows 7 with the 64 bit Microsoft Windows 7 Starter edition. It runs fine on all the computers I have tried 1d6a3396d6
