

A: I'm not sure if you need the " quotes or not, but try the code below (I'm assuming you want to parse it into a list of your own objects):

```
def main():
    file_names="words.txt"
    f = open(file_name, "r")
    count = 0
    for line in f:
        line = line.strip(" ")
        x = line.split(", ")
        if(count==0):
            print(x[0])
            if(count == 1):
                new_list = []
                new_list.append(x[0])
                new_list.append(x[1])
            if(count == 2):
                new_list.append(x[0])
                new_list.append(x[1])
                new_list.append(x[2])
            if(count == 3):
                new_list.append(x[0])
                new_list.append(x[1])
                new_list.append(x[2])
                new_list.append(x[3])
            if(count == 4):
                new_list.append(x[0])
                new_list.append(x[1])
                new_list.append(x[2])
                new_list.append(x[3])
                new_list.append(x[4])
    f.close()
    print(new_list)
main()
```

A: I found this question. I'm just looking for a. I found this on this page. This will select the last 10 entries: `SELECT * FROM MARKET_ITEMS WHERE Market_ID = (SELECT MAX(Market_ID) FROM MARKET_ITEMS);` This will select a random one: `SELECT * FROM MARKET_ITEMS WHERE Market_ID = (SELECT MAX(Market_ID) + 1 FROM MARKET_ITEMS);` This will select one at random and delete it from the table: `DELETE FROM MARKET_ITEMS WHERE Market_ID = (SELECT MAX(Market_ID) + 1 FROM MARKET_ITEMS)` Then I just have to figure out what to do with this! Q: Create a.json file to download on iPhone I am creating a json file with info from a web service. I want to create a json file(for example) in to the main apps documents directory so a user can download it and it saves it for them as a file that can be opened in any text editors, so I just have to include it in the document and then its a downloadable file in the app thanks. A: Have a look at `NSURLResponse`. It has a method - `getContent : + (NSData*)getContent:(NSURLResponse*)response { NSMutableData* content = [NSMutableData data]; NSData*data = nil; if ([response isKindOfClass:[NSHTTPURLResponse class]]) { NSHTTPURLResponse* httpResponse = (NSHTTPURLResponse*)response; data = httpResponse.allHeaderFields; } if ([response isKindOfClass:[NSContentDirectoryURLResponse class]]) { NSContentDirectoryURLResponse* cdResponse = (NSContentDirectoryURLResponse*) response; data = cdResponse.contentData; } if 570a42141b`
