The potential advantages of an absorbable suture designed for closure of a lateral chest wound are reported. The suture is composed of unidirectional high-strength polyglycolide fibers with a dense unidirectional weave. The suture can be used with a 2-0 suture passer, and is knotted in a continuous fashion. Suture strength and histology were evaluated in fresh cadaveric specimens. Polyglycolide monofilament suture passed through the pectoralis major muscle in a fashion similar to the intradermal technique can be used for the closure of skin wounds. Fibroblasts incorporated into the polyglycolide substrate and formed a dense neomucinous repair. The suture showed adequate strength to resist tension.

What kind of connections are available on your computer will depend on the type of computer that you own, but you can also gain additional options with a network adapter on your gaming rig. In this how-to, we'll talk you through the process of simply installing an Ethernet adapter for your PC, or using a wireless network adapter. In addition, you'll learn about the different methods for setting your computer up with a network, and how to avoid the most common mistakes people make when they do so. If you want to do away with the hassle of manual configuration, you can download the Easy Home Network Setup for Windows 7 I. Discovering Your Network Link That said, the first step is to actually look for your router and any network devices on your network. Luckily, this is not an overly complex task. Look on the back of your router for some kind of identifier. In the case of a wired router, this might be a physical button on the back of the box. When it comes to a wireless router, you'll notice that it has a small wireless indicator light. Plug your Ethernet cable or wireless adapter into your router, and see if it starts to search for available networks and connections. If it does, then you'll want to start the process of setting it up with your computer. This process is a bit longer than simply plugging an Ethernet cable in, but the benefits can be substantial for future configurations as well. II. Checking the Media Access Control (MAC) Address Now that you're getting closer to finishing up the network setup, it's time to set up the technical side of things. The first step is to discover your local network settings and configuration. Open up your Network and Sharing Center, then select "Set up a new network or connect to a network." When you're taken to the Windows 7 wizard, you'll have to locate your Internet connection details. The first step is to check the name and IP address of your Internet connection. These will most likely be provided to you by your Internet Service Provider (ISP), but you can also check your router if you
