Interbase Users Manager

The purpose of this tool is to create a system to manage one or more Interbase users. These users are created in the Interbase database, and the data is stored in the form of objects, which are easy to move between databases. Interbase Users Manager is a easy-to-use tool that is designed specifically for use in managing Interbase users. Once you've selected a database to work with, the Interbase Users Manager tool will automatically identify any existing users and grant them the level of permissions that you've defined. Interbase Users Manager has a simple, easy-to-use interface that will enable you to select a user's name for use, and then to define the level of permission for that user. On the menu bar you will see an option "Create New User" and you can choose the database that you wish to store all the user information in. Once that is done, all that is left is to go through the user and grant them the level of permissions that you've chosen. The Interbase Users Manager also contains a built-in help file with a quick reference for the most frequently used items, and if you've used the tool and have comments or questions, you can always e-mail us. If you are using Interbase version 7 or 8, you must use Interbase Users Manager 6. If you are using version 9, you can use Interbase Users Manager 7, which is now the latest version available. If you are not using version 9, then you can download and install a demo version of Interbase Users Manager 7 to see if it will work with the applications that you are using, or if you need to contact our team to confirm that it can be added to your existing Interbase installation. Interbase Users Manager Version 9.0.9.0 Installation and Running The latest version of Interbase Users Manager 9 is 9.0.9.0. The installation process is the same as for other commercial Interbase applications. You will need to install the program on a stand-alone PC and choose "Copy, not save" as your installation option. As with other products, the Interbase Users Manager application is composed of two parts: The Interbase Users Manager utility, which is the actual application. The database files that hold user information. For the Interbase Users Manager to work, you will need to store a database file that is named "user.ibd
