The plus version of Pulsation has a 3 band per voice envelope processor with no saturation, 2 extra LFO's, an extra resonant filter, an extra key-trace for a synth string sound and an extra VCA. The unit has its own built in sequencer, so syncing was easy and the PCM sounds have a 4k sample rate. For people who want to explore the possibilities of the advanced Pulsation has a truly world class sound set of 64 presets made available for the plus edition. All presets are 100% made in the unit

---

and are accessible in the preset menu of the synthesizer section. Cracked Pulsation Plus With Keygen is obviously going to be incredibly desirable for synth novices as it gives everything that has made the original version so popular but also presents it to experienced synth-heads as an alternative to the famous budget synthesizers of yesteryear. Pulsation Plus Features: 64 presets made exclusively in Pulsation plus.

Pulsation Plus Synth Sound Section: Intuitive easy to edit setup & DAW integration, has it's own sequencer with a very easy edit setup & the

---

samples are arranged in an almost random order across the 8 dynamic patches. There are 8 dynamic patches of voice 1, voice 2, voice 3, voice 4, voice 5, voice 6, voice 7 and voice 8 plus an effects send and return, which together with the 16 factory presets makes a total of 64 patches. Each of the 8 voice sections has it's own envelope processing with a range of filters and resonance controls, there is no saturation in the sections apart from that overloading of the envelope processing would be a sign of abuse and the presets have been made with the intention of

---

being used as much as possible. All the 16 factory presets can be assigned a name and each of the voice sections has a sequencer edit function which is very simple to use. The 4 Lab. and 2 Play modes have been duplicated with Pulsation and Pulsation plus so that you can see the difference between an external input and the internal 8 buffers and 8 internal patch banks. LFO's and VCA controls are also very easily accessible on both Pulsations and in addition both Pulsation and Pulsation plus have an extra LFO which can be used in the sequencer as a step

sequencer to produce that warped effect. Extra Harmonics are also included. The Pulsations controls: Adjustable attack mode. Lock

In Pulsation Plus we continue to take our next step forward in sonic quality and explore the full potential of Pulse wave synthesis and audio plus is a fully featured synth featuring over 64 presets which can be arranged into 4 unique banks giving you a total of 128 presets for all your sonic needs. Each preset can

---

be loaded into one of the 4 different Sub-Banks, arranged into 32 different presets per sub-bank. The synth features 4 independent audio oscillators with distortion, pulse wave synthesis and modulation options. Whilst the modulation options in Pulse Wave Synthesis are limited to the options in Lite Pro-Sounds they are detailed within the manual and are superb sounding when used creatively. The LFO features the same fine tuning options and visualisation as Lite Pro-Sounds, however no external MIDI Clock is required to sync the LFO to the

---

audio oscillators, making it perfect for live performance use. Control of the 4 audio oscillators is via two separate oscillators and two pan pots to control the audio split between the two. The LFO is also a separate oscillator with a mixer to control the amount of waveform smoothness and also functions as a modulator to control the synth effects, whilst the feedback controls the rate of the LFO. Within the UI, the user can scroll through the 16 mini pages or by simply selecting the first 16 audio oscillators, to change the frequency and modulations of each of the 4

---

oscillators. To quickly select all the audio oscillators within a page the user can use the set, mono or reset buttons. The synth features an array of filter effects to make the sounds you can achieve with Pulse Wave Synthesis really sound good, and be heavily used as they offer several different ways of changing the tonal properties of the sound. Firstly the user can choose to pass through or bypass all the filters, secondly the user can select the filter type, from a Low pass, High pass, Band pass, Low and High shelf and a resonance type either on or off. There are in

---

total a total of 5 32 pole filter types available, the same types which are provided in our other synths. The High-pass filters are extremely useful in applying sustain to sounds and the Low pass filters can add a nice slapback to the sound, whilst the High shelf filters are great at controlling the way a sound is brightening or dulling the attack of a sound. The resonance filters are also extremely useful, with an on resonance band-pass filter giving a nice warm growl to 09e8f5149f

The Amplitude Envelope is modulated to control Pulse Volume, Pulse Width and Pulse Count sequentially using sawtooth and triangle waveforms. Separate Pulse Width and Pulse Width Modulation with a decay and release time. Control Pulse Frequency with an LFO. Electro Frequency Modulation with a VCA, VCA Amp and VCA Envelope. Sustain, Chorus, Reverb and other effects. Filters, Compressors, Equalisers and Limiter with customizable values. Variable

---

Delay, Delay, Reverb and Mix effects. Completely reworked control section, with massive improvements to usability, live performance and sound. All controls visible from the display. 64 of the most creative preset sounds ever made in any synth ever. 8 ADSR Envelope and LFO parameters. Normal/Expanded keys for minimal work. One bar per line with easy editing and playback as stand-alone audio. All presets are stored within the kit itself, allowing any presets to be inserted or removed while the kit is kept silent, quiet and ready to go.

#### What's New In Pulsation Plus?

As the name suggests, Pulsation Plus offers six oscillators in pulse wave form, each with voice filtering and a dedicated ring modulator. You can sync the pulse rate between up to eight oscillators and the module allows you to modulate other parameters and switches added to provide an even richer palette of

---

sound shaping options. The oscillators have both LFO modulation and two synchronized ADSR envelope generators to further shape the waveforms in the most flexible and expressive fashion. All of the oscillators can also be used as complex filter modules and there are many customisable parameters to play with. Pulsation Plus is the most powerful oscillator available in audio synths and it is capable of creating sizzling leads, fat beats and sublime pads. The possibilities are endless.
