FPCult is based on the Free Pascal compiler and supports all features, but can be used as a FPC based development environment (link to Lazarus-components) for Windows. Lazarus is a FreePascal and Lazarus IDE that supports most common IDE features, like code completion, auto-formatting and more. It is a great IDE for FreePascal development that will make you forget about the old day of Turbo Pascal. FreePascal/Lazarus is a development environment with a graphical form designer for creating new GUI applications. It is based on the Lazarus Component Package project, which is a FreePascal/Lazarus IDE. The IDE is open source and released under the GPL license. It supports the Lazarus component library. New in Lazarus 1.1: New features of the Lazarus 1.1 IDE: The first big feature in Lazarus is the new form designer. You can get a whole application created in just minutes using the form designer. The form designer is called the Lazarus form editor. With the form designer you can create a form based on the form library and with a single click automatically save your work and close the form you are working on. Every form also has a component list, a list with all components supported by the form. There are two input fields in the component list: the "Source of the component" and the "Compiler". You can also use the "Definition" input field to see the source of the component or the source of the file containing the source of the component.
