Although Photoshop is very popular with photographers, a novice may not need Photoshop to work professionally. You can use Photoshop to create and edit basic images, but you can also create basic images in other programs. In this book, I focus more on Photoshop's features than on the basics of using it. I discuss Photoshop's features at length in Chapters 5, 8, and 15. I also offer tips and tricks on how to get the most from Photoshop. Photoshop isn't just for image-editing specialists. Just about every professional photographer uses Photoshop to create images for print or digital sales. And, even though you can create and work with images in other programs, I found that Photoshop is so much easier to use, and it offers more advanced functionality, that it makes Photoshop a much better choice for most users. Chapter 16 is devoted entirely to exposing the full breadth of Photoshop's capabilities as an image-editing tool.

Photoshop's Layers Some people find that working with layers is confusing. The way layers work in Photoshop is fundamental to the way you work with images. If you're new to working with layers, take a few minutes to familiarize yourself with the process. If you're up to it, you can read the chapter in this section to get a thorough understanding of the layer system and how you use layers in your work. The key to working with layers is that they're your work surface. A layer contains an image on which you perform edits. You can add, remove, or even create new layers. So if you have a flat image where you want to add text, for example, you create a layer that's attached to that image. You can then work with the text on the layer without affecting your original image. You can crop the text, add arrows or other effects to the text, resize it, and even add an image on the layer's background. Working with layers is a lot like working with grids or paper. You can think of the image on a layer as a piece of paper to which you add text and other effects, and then you can move the text or crop it. When you work with layers, you can create new layers, add to the layers' contents, and duplicate layers. You can even create an unlimited number of layers. These features make Photoshop a very powerful program because they enable you to quickly and efficiently work with multiple images. When you work in Photoshop with layers, you work in a different way from

Even if Elements started as a small, simple editor, it became popular and grew into a full-fledged photo editor, which is still one of the best image editing software suites available today. If you're looking for an image editing software that can edit RAW images and adjust exposure, tone, and colour, Photoshop Elements 8 is the right choice. My Best Photos with Photoshop Elements I've edited hundreds of photos with Photoshop Elements. It's a fantastic photo editing software. You don't need to be an expert to use it. It's easy to learn and use. Let's take a look at some of my best photos and how I edited them with Photoshop Elements. This is a photo of my former office after I had to move out. I met a few good friends there. I was so sad to leave this beautiful space, but I'm so happy to be working from home now. I decided to go on vacation with my friends. I used Photoshop Elements to edit the photo. I took the photo with a Nikon D5500 camera, and I edited it using my Canon 5D Mark III. To take this image, I used the following settings: Aperture: f/5.6 ISO: 400 Shutter speed: 1/200 seconds Focal length: 70 mm Exposure compensation: +0.2 You can use another camera model, or you can use Photoshop Elements to adjust the colours in your photos. You can use the HSL (Hue/Saturation/Luminance) or Hue/Saturation tools to change the colours of your photos. You can also use the Lighten, Lighten Shadows or Levels tools. You can also use the Adjustment Brush tool to apply adjustments to your images. In this photo, I changed the White Balance. That's the main thing that I changed in the photo. I also made a few changes using Levels. This is how I changed the Whites Balance. I used the Opacity and Soft Light blend modes. I blurred the entire image with the Gaussian Blur tool. This photo was too bright. I changed the Brightness/Contrast levels. I used the Auto Tone tool to change the colours. I changed the Saturation by using the Hue/Saturation tool. I also used the Grad 9b3c6dd9d5

Friday, October 15, 2011 CRAZY STUFF THAT HAPPENED LAST NIGHT I woke up in the middle of the night and my eyes were running. I had no idea what it was, but this had happened before. I didn't want to get up, but my husband has to work in the morning. I almost stayed in bed, but eventually I got up and my eyes were still running, so I washed my face and changed my clothes. At one point I needed a straw to drink from the water pitcher, as I could barely see. I still was thirsty, so I drank up. Once he had to leave, I went to the bathroom to wash my face a second time, as my eyes had stopped running and my vision had returned. I was stunned as to why they were still running, especially because I hadn't had any wine the night before, and I usually have a glass. Maybe it was the honey milk I drank after dinner. So I went back to bed, but I couldn't sleep. I eventually fell asleep, but at 3am I woke up again. I checked my phone, it was still 3am, and there were three voicemails from my mom. I felt like I was back in high school, I don't even remember how old I was when my mom used to call me at 3am to wake me up for school. I finally got back into bed at 3:45am and fell asleep. I woke up around 6:45am and went back to sleep for a bit, but before I could go back to sleep, I felt my right eye start to twitch. No, it wasn't something that was in the back of my eye, it was like a muscle spasm, but it was up toward my eye. I went to lay on my back so I could ease my head down and I managed to sleep. I woke up around 9am feeling fine, so I got out of bed and took a shower, and I have been doing that every morning ever since. I'm still not sure what happened, it doesn't even sound like the same symptoms as when I woke up. Watching someone being bitten by a venomous snake is pretty scary, but it's even worse if you can't help them. Luckily, a snake-bite detection system is in the works, and it's coming out of the Smithsonian to help out future snake-bite victims.

Q: weird JSON error with Zend Framework I am having a weird issue with Zend Framework. Here is the code I'm running `$json = file_get_contents(""); $decoded = json_decode($json, true); var_dump($decoded);` The JSON object I'm receiving is a collection of objects. When I `var_dump` it, I get this: `object(stdClass)#4 (25) { ["error"]=> NULL ["ended"]=> int(0) ["count"]=> int(0) ["errors"]=> NULL ["request"]=> int(0) }` I've taken a step back and just echoed out the array and it's giving me this: `Array ([error] => [ended] => [count] => [errors] => [request] =>)` I'm obviously doing something wrong here, but what? A: `$json = file_get_contents("`
