The introduction of the new model is therefore accompanied by both a passive and an active solution. Thus, it comes with a passive USB lead that can be connected to any PC that is equipped with a USB port. However, there is also a battery lead that is equipped with a USB adapter. With this accessory, you can connect your camera to a USB port of your notebook. There are several ways to get things going with Creative Live! Cam Center, the initial one being to launch the software by pointing the utility at your camera. Next, you should open the device itself by pressing the power button that is located on the top left corner of the camera. The latter is also very important since you will be able to choose between H.264 and MPEG-4 codecs. To start recording, press the play button and the recording will begin automatically. After the recording is done, press the Play button, a notifying message will appear on the screen and the utility will begin playing the content.
