"This new approach to gameplay will help FIFA to remain at the forefront of sports video games," said executive producer Matt Prior. "And with our industry-leading Net code and goal-poaching sprint system, it will also inspire the next generation of players to pick up a controller and get involved with the most authentic football experience in the world." This will be the first major new addition to the series since the introduction of 'FIFA 15' in 2014. The game is released worldwide today for PS4, Xbox One, PS3 and Xbox 360.

Prognosis of non-AIDS-defining cancers in non-AIDS-related diffuse large B-cell lymphoma: a retrospective cohort study. This study evaluated the prognosis of non-AIDS-

defining cancers (NADCs) in patients with non-AIDS-related diffuse large B-cell lymphoma (DLBCL). A total of 2,926 patients with non-AIDS-related DLBCL (diagnosed between 1985 and 2012) were identified. The cumulative incidence of death due to NADCs and DLBCL at 5 years was 26.7% (95% CI = 21.5-31.7%) and 22.3% (95% CI = 17.9-27.0%), respectively. NADCs were detected in 24.4% of the patients with DLBCL at the time of initial diagnosis. The adjusted risk of death due to NADCs was higher in patients who had NADCs (hazard ratio [HR], 2.96; 95% CI = 1.98-4.49) and higher international prognostic index scores than those without (HR, 1.54; 95% CI = 1.41-1.69). The cumulative incidence of death due to NADCs and DLBCL was 41.2% (95% CI =

36.1-45.4%) and 33.2% (95% CI = 29.0-37.6%), respectively, at 5 years after the first-line treatment. The estimated relapse-free survival at 5 years was 50.8% (95% CI = 46.0-54.5%) for patients who had NADCs and 65.7% (95% CI = 62.9-68.4%) for those without. These results indicate that the prognosis of DLBCL varies among patients with different underlying conditions. DLBCL patients should be carefully examined for the development of NADCs during their clinical
