If Word is set in another location than the default directory, users can gain access to the configuration panel of The Shortcut - Microsoft Word and resort to the built-in file explorer to find and indicate Word's executable file. An aspect worth noting is that the widget identifies the.exe file of any software program, whether it's installed or portable. This means that it's possible to configure it to launch any kind of tool besides Microsoft Word. Therefore, it's not mandatory to have the word processor installed to get this gadget up and running.
