Motion capture technology captures the player's true movements in real-time. Having full-body motion capture at every frame of the game would have been impractical, so FIFA 22 tackles the challenge of capturing all of the data from the players in motion through a combination of techniques. Motion capture data is collected from players in training sessions, and then in-game, and it's used to create additional animations, as well as improve the accuracy of player AI and the ball controls. Real-life players, not clones, will be starring in FIFA 22. In fact, every single football player from any of the top 21 FIFA World Cups starting with 1966 will make an appearance in the game. The London 2012 Olympics will also be featured in FIFA 22. [GM] 20/07/17: FIFA 22 will include the motions of 22 top-level football players: from 1970 to 2016, including some that have not been seen in FIFA for a while - and even one that has not been seen in motion simulation games at all - with the entire collection of motions, including running, standing, tackling, diving and aerial duels, used to create new animation and boost accuracy in gameplay. The result will be more realistic animation of players' actions, more accurate ball controls, better player AI and an even better "feel" for the game. "We want to create a true-to-life football experience," said FIFA producer Sam Chang. "A real football game should be all about the gameplay and the feeling it gives, not whether the animation is photorealistic. But we also don't want to have to rely on a single technique, so this is the perfect place to experiment with various techniques to create a fully-animated game." The motions of each player are captured in motion capture suits. In-game, the data will be used to create new animations, make player AI a lot more accurate and enhance the ball controls. From the historic 1970 World Cup, via four Olympic Games, to the likes of Lionel Messi, Luis Suarez and Cristiano Ronaldo, all footballers featured in FIFA 22 are in the top tier of global players. Although FIFA 22, the 20th installment in the franchise, is a celebration of top footballers, FIFA has a history of going behind the scenes with the greats and finding out what makes them tick. The game features a "

FIFA (Fédération Internationale de Football Association) is the governing body of football (soccer), holding the men's FIFA World Cup and the FIFA Women's World Cup, their own events and organises the FIFA Club World Cup and the FIFA Confederations Cup, the women's equivalent to the men's World Cup. FIFA rankings are used to determine qualification for the major tournaments, and the World Cup hosts are determined by the rankings following the previous edition of the World Cup. The rankings are also used to determine the qualification for the Club World Cup and South American and CONCACAF group qualifying for the Women's World Cup. On a national level, football associations or football federations are responsible for organising football in their country and qualifying their athletes for the Olympic Games. They also organise football league systems, with the top teams in the country playing in a national league and with the lower-ranked teams in a lower league until the club competitions. At club level, the European club competitions organise single-elimination tournaments between the teams in their respective country, and these teams are known as the domestic league champions. In the United States, the National Football League (NFL) organises most of the major football leagues. After the NFL, the four other major leagues in the United States are divided amongst two competing organisations. In the United Kingdom, the English league system is organised in a similar way to the European system. Many countries with a large population of football fans, such as Germany, Italy, Spain, France and Portugal, have two or more major football teams in the highest league in the country.
