HyperMotion has been an integral part of the FIFA experience since the launch of FIFA 07. This year, FIFA 22 introduces a number of improvements to the core gameplay mechanics to deliver an unrivalled experience. Player Trajectory Suppressed shots and low crosses HyperMotion delivers an unprecedented level of player physics and control, with the ability to accurately reproduce the action of a live-match situation. To demonstrate how HyperMotion can enhance on-field gameplay, for this feature we will be highlighting a variety of techniques that we feel can create more goal-scoring opportunities, or emphasise players' strengths. We will also be exploring how shot suppression and crosses can now be added to the game. Suppressed shots A key addition to FIFA's shooting mechanics, suppressed shots are now available in FIFA 22. We have seen in the below video how a player can

---

move away from a situation and how a defender may chase the player back and then make a delayed run towards the ball. These circumstances are all potential opportunities for suppressed shots to be taken. To create an example suppressed shot for FIFA 22, drag in the arrow player to the ball and press shift + s to bring up the Suppressed Shot menu. Select one of the options above and hold the spacebar to activate the shot. Now return the arrow player to his starting position and press the R1 key to activate the shot. Doing this creates an opportunity for a penalty-box out-ball. Low crosses provide a method of launching a cross when a defender is not paying enough attention to a player in possession of the ball. To create an example low cross for FIFA 22, drag in the arrow player to the ball and press shift + s to bring up the Support menu. Select the 'Low Cross' option and activate the cross. Now return the arrow player to his starting position and press

---

the spacebar to complete the cross. Zonal defence Zonal defences will now grant defenders protection from a certain area of the pitch, thus making it easier to dictate the course of the match. Let's take the example of an opponent's deep block. Here, the opponent has positioned himself in front of the centre circle in order to block passes to the opposition's forwards. Note how the player is well protected from the opponent's advances.

**FIFA is a football video game series developed by EA Canada and published by Electronic Arts. The series has since been released on personal computers, the Sony PlayStation, and other gaming platforms. FIFA's gameplay mechanics have been the subject of controversy over the years, most notably for its defensive AI, where a human player's tackling could be overruled by game mechanics. The series has been the recipient of a number of awards, including the British Academy of Film and Television Arts' Game Innovation**

---

**Award. The history of the series goes back to FIFA Manager, a game released for Windows PCs in the United Kingdom in October 1993 by Bullfrog Productions. This was the first game in the series and served as the basis for all future titles in the series. FIFA Manager was a sports management simulation game. Goals, substitutions, team management, transfers, and scouting were some of the features of the game. From its release in 1993 until 1995, the game sold approximately 400,000 units. In 1995, Electronic Arts purchased Bullfrog and took on the franchise. Bullfrog received the rights to FIFA Manager and developed it as the basis for a new game, FIFA Interactive Football. This was released in 1995 for the Macintosh platform and in**

**1996 for Microsoft Windows. This is the first game in the FIFA series to feature licensed players rather than computer-controlled players. In March 1998, FIFA Interactive World Tour was released on the PlayStation. This was a game that could be played either on a computer or on a PlayStation, and was the first game in the FIFA series to launch on Sony's newest console. It was a console version of FIFA Interactive Football and featured updated graphics and content. The game was also the first to include international football leagues. It was a launch title for the PlayStation. The game received critical and commercial acclaim, and was successful in North America and Europe, selling over 50 million copies worldwide as of February 2005. For the PlayStation 2,**

**EA developed the game alongside the entire FIFA franchise, known as FIFA Soccer in North America. This introduced new features such as new stadiums, commentary by John Sales and Sam Arthur, and live players such as David Beckham. FIFA Soccer 2005 was released for the PlayStation 2 in September 2005. EA's next game in the series was FIFA Street, published in October 2006. It was released for the PlayStation 2, Xbox, and Wii, and featured licensed players and stadiums. It was built on an engine similar to that of FIFA Street 2**
