If you're going to be self-teaching, I recommend buying the student version of Photoshop (see the following section for more information). Otherwise, some companies offer \$9.99 to \$29.99 monthly subscriptions to Photoshop. Photoshop CS6 is my preferred version of Photoshop. Not only is it the latest version, but it also has all of the features that professional photographers use. To my knowledge, no such thing as Photoshop beginners exists. The CS6 version is also part of the Adobe Creative Cloud, meaning that you can access your work on all your different devices and computers if you're subscribed to the \$50 monthly service. Photoshop's complexity can be intimidating, but there are many useful tutorials out there. I go through an entire book about Photoshop's many features in Chapter 8, but a few topics are essential here. You need to understand the following to use Photoshop: The feature palette (the task bar at the bottom-left corner of the Photoshop window) is useful to see the currently selected tool and what it can do. Use layers to build up complex images. Create selections to choose an area of an image. Photoshop has a built-in tutorial system, but you may not need it unless you aren't easily intimidated. If you need to learn more, use the Web. I list some good Web sites at the end of this chapter. Photoshop CS6 includes the following major features: A unified user interface Solid layers: A layer that can be moved, moved, and manipulated Masking: An image can be masked, or hidden, by hiding the contents of a layer Color Picker, which lets you sample colors Layers Panel, which consolidates layers and masks I cover layers in more detail in Chapter 3; masks in Chapter 10; the color Picker in Chapter 11; and the Layers Panel in Chapter 12. Photoshop CS6 has many more features, such as invisible ink, but I don't go into detail here. If you're not sure about how to use

some feature, check out the help system. Photoshop CS6 is the version of Photoshop to purchase if you want to get the most out of the program. Buy the upgrade or buy a copy of another program. Using the Toolbar The Toolbar is where the majority of the feature buttons are located. The default view is a skinny

Q: Youtube API query - get channel subscribers count With the Youtube API i'm trying to get the number of subscribers to the channels (via the channels list). I tried the following request, and i'm getting an error 401. {"alt":"media:group","content":{"key":"VIDEO_ID_KEY","name":"name","value":"value","updated":{"\$t":"2013-06-22T13:27:09Z"},"media\$group":{"media\$category":[{"type":"media\$people"}],"media\$content":[{"type":"application/atom+xml","subtype":"application/atom+xml","href":""}],"media\$description":{"\$t":"description"},"media\$keywords":[{"type":"text/plain","value":"keywords"}]}} {"error":{"code":400,"message":"Invalid parameter value for parameter in the query string of a GET or POST request. Invalid character '|' found in urn:youtify, line 12, position 206.","status":"INVALID_ARGUMENT","title":"Invalid parameter value for parameter in the query string of a GET or POST request.","trace":["v","{id}/channel/{channelid}/subscriptions","/","{id}/channel/{channelid}/subscriptions",""]}}

Am i doing something wrong? Can you help me? A: The API is doing it's best to obscure the fact that you're looking at a channel's subscriptions. Use of the 2-5-2

Q: UIPickerView's delegate is _delegate I'm using UIPickerView and add a delegate and datasource to my UIPickerView, I'm a little bit confused about delegates and datasources. In particular, my UIPickerView is using a UITableView, so when my tableView load its data, my UIPickerView's delegate method is fired: - (void)tableView:(UITableView *)tableView didSelectRowAtIndexPath:(NSIndexPath *)indexPath { [myPickerView reloadDataComponents]; } As you can see, my delegate is my pickerView's dataSource. But the UIPickerView is using myTableView as delegate, so when my tableView's cell is selected, isn't fired the delegate? In this case, if the UIPickerView's datasource is the UITableView's dataSource, how is it possible that the UITableView's delegate is not set? A: A UIPickerView is just a view, that is part of a view controller. You set the view controller as the picker's dataSource and delegate, and ask the view to implement delegate methods on the view controller. Thus, at any given time, you can have one or more UIPickerViews associated with view controllers. Each will receive delegate and datasource messages, when the view controller's view state changes (e.g. the view is displayed and hidden, the scroll position changes, etc). If there is just one UIPickerView associated with a view controller, it is a one-to-one relationship between the view controller and the UIPickerView. But if there are multiple UIPickerViews, this view controller is the datasource and delegate for all of them. When the delegate method -tableView:didSelectRowAtIndexPath: is called, the picker's data source will give the delegate the information about the row that was selected. This is the point at which you can get a reference to that row, and do anything you like with it (e.g. change the picker's view and layout). In the Internet age, a group of computer users can often communicate over one or more computer networks. A computer network is a group of two or more computers or other devices linked together. Most computer

System Requirements:

Minimum requirements: OS: Windows 7, Windows 8 or Windows 10 Processor: 1.8 GHz Intel Core 2 Duo, 2.4 GHz Intel Core i5, AMD Phenom II X3 RAM: 4GB (8GB if the system has 3D Acceleration) Graphics: DirectX 11 and Shader Model 3.0 (also known as FX 3.0) Screen: 1024 x 768 or higher, 16:9 Required HDD: 300 GB or higher (3 GB or higher if the system has 3D Acceleration)
