Methods of modulating the immune system and diseases using the immune system have been reported. In particular, cancer immunotherapy has been drawing attention, since it provides a therapy having almost no side effects. Representative cancer immunotherapies are: a) cell therapy, b) immunotherapy using vaccines, and c) immunotherapy using antibodies or antibody fragments. Of the above, immunotherapy using antibodies or antibody fragments makes it possible to specifically deliver desired materials to target cells, and thus is advantageous for suppressing side effects on normal cells. However, such antibodies or antibody fragments are mainly used for suppression of undesired immune responses because a part of the antibody or antibody fragment is always bound to an antigen in blood, and a part thereof remains in the body after blood clearance. Therefore, in many cases, it is desirable to make the use of antibodies or antibody fragments after modification of their molecular structure. Representative examples of such modifications are (1) molecular manipulations using binding sites such as Fc, a part of the antibody or antibody fragment which does not bind to antigens, (2) amino acid substitutions to enhance antigen binding characteristics, (3) fusion of parts having different functions or from different antibody classes, (4) introduction of a polypeptide to improve metabolic stability, and (5) introduction of a polypeptide to provide Fc effector function such as complement-dependent cytotoxicity (CDC), antibody-dependent cellular cytotoxicity (ADCC), and phagocytosis. For example, in a modulatory technology using Fc effector function, an Fc of antibodies is replaced by an Fc effector function-containing polypeptide. Representative examples of such polypeptides are NK mAb (Okamoto et al., *Nat Med.*, 3, 298-303 (1997)), CD27 mAb (Bu et al., *Biochem Biophys Res Commun.*, 262, 963-968 (1999)), CD28 superagonist (Linsley et al., *J Exp Med.*, 186, 597-607 (1997)), bispecific binding via Fc (Gross et al., *Science*, 276, 404-406 (1997)), NGF DAN, NT-3, or CT-1 (Suzuki et al., *Nature Med.*, 4, 321-328 (1998), Dougall et al., *Nature Med.*, 4, 662-666 (1998), Kim et al., *J Exp Med.*, 188, 1885-1893 (1998)), and
