If you don't want to use Photoshop on an everyday basis, why not get a copy of Photoshop Elements and use it? Finally, don't forget the Adobe Download Center at www.adobe.com. This is an extremely popular download site for all Adobe applications. It makes downloading apps and keeping them updated a breeze. At the time of writing this book, it's best to search for the file type you need, rather than go to the site and select individual programs, because it's much faster, and there is sometimes an option for saving a .zip file. FIGURE 2-2: The basics of photo editing. You will find a screen shot of any image as a .PSD, or .PSB, file, or you can use the Eye Of The Photo app to view and modify it in a new window, as shown in Figure 2-3. FIGURE 2-3: You can view, modify, and save a photo in this app. In the following sections, we describe the steps of making corrections to a photo. Finding a Lens Correction Filter Lenses often distort images in a specific way. If you're using a lens, such as a lens adapter or a camera lens that isn't a complete lens, you're going to see major lens distortions that you need to eliminate from your images. Lens correction is done on a layer and consists of three steps: Remove distortions: You don't have to do any of this, but we recommend that you inspect your photo's lens distortion and try to minimize it if possible. Reshape your image: To reshape, move the layers up and down in the Layers panel to get the proportion you want, as shown in Figure 2-4. Apply any necessary corrections: Some lens distortions are easy to correct, and others are impossible. You can fix most simple lens distortion problems by adjusting the top-right corner of an image. Other types of distortions require more work. FIGURE 2-4: You can view the distortion of your lens in this view and correct it. You can use the Built-In Lens Corrections filter found in the Adjustments panel in the Lens Correction Filter (lens.cab) file, or you can use the Photoshop Elements Lens Correction filter in the Filters panel. To get to the Lens Correction filter, choose Filters⇒Adjustments⇒Lens Correction. Figure 2-

Q: Numeric characters at the end of a string I am reading in a.txt file using the following line of code. For instance, the file "text.txt" has the following text in it: "how do you feel?" I am trying to strip the text from the.txt file and create a string that only consists of the integers. So the final string should be "how do you feel". Is there a specific way to do this? I tried the following code: `string[] test = File.ReadAllLines("text.txt"); string finalStr = String.Join("", test);` A: You can use `String.Replace` to edit or replace text in a string, or a `Regex` for more advanced edit functionality. `string str = "how do you feel?"; string pattern = "[a-zA-Z]*"; string replacement = ""; str = Regex.Replace(str, pattern, replacement); Console.WriteLine(str);` Output: how do you feel In fact, you can put those two parts of code into one: `string str = "how do you feel?"; str = Regex.Replace(str, "[a-zA-Z]*", "");` Output: how do you feel This code will only replace letters. The empty string is replaced by an empty string because "[a-zA-Z]*" will match zero or more upper-case or lower-case letters. By default, a regular expression will always return a match; this is called greedy matching.
